
PLANT LIST

Qty	Botanical Name	Common Name	Size	Cdn.
TREES				
19	Acer circinatum	Vine Maple	3.5m. ht.	B&B.
3	Acer palmatum	Japanese Maple	2.5m. ht.	B&B.
8	Acer truncatum	Norwegian Sunset Maple	7cm. cal.	B&B.
3	Liriodendron tulipfera	Tulip Tree	7cm.cal.	B&B.
9	Pinus sylvestris	Scots Pine	2.5m. ht.	B&B.
3	Platanus x acerifolia	London Plane Tree	7cm. cal.	B&B.
7	Populus tremuloides	Trembling Aspen	3.0m. ht.	B&B.
SHRUBS				
38	Azalea 'Gumpo White'	Gumpo White Azalea	0.3m. ht.	#2 pot
22	Arbutus unedo	Strawberry Tree	1.0m. ht.	#3 pot
3	Choisya ternata	Mexican Orange	0.5m. ht.	#3 pot
27	Cornus stolonifera	Red Twig Dogwood	1.0m. ht.	#2 pot
6	Cornus stolonifera 'Faviramea'	Yellow Twig Dogwood	1.0m. ht.	#2 pot
177	Gaultheria shallon	Salal	0.2m. ht.	#1 pot
471	Mahonia nervosa	Long Leaved Mahonia	0.2m. ht.	#1 pot
40	Mahonia aquifolium	Oregon Grape	0.5m. ht.	#3 pot
82	Osmarea burkwoodii	Burkwood Osmarea	0.5m. ht.	#3 pot
3	Osmarea fragrans	Fragrant Osmarea	1.0m. ht.	#3 pot
54	Pachistima myrsinites	False Box	0.3m. ht.	#2pot
14	Philadelphus lewisii	Mock Orange	1.0m. ht.	#3 pot
30	Pinus mugo mughus	Dwarf Mugo Pine	0.5m. ht.	#3 pot
125	Polystichum munitum	Sword Fern	0.2m. ht.	#1 pot
8	Vaccinium ovatum	Evergreen Huckleberry	0.3m. ht.	#2 pot
3	Vaccinium parvifolium	Red Huckleberry	1.0m. ht.	#3 pot
VINES AND GROUNDCOVERS				
30	Parthenocissus quinquefolia	Virginia Creeper		#1 pot

ALL WORK TO COMPLY WITH B.C.S.L.A/B.C..L.N.A. STANDARDS.

TITLE
PLANTING PLAN

DRAWING NO. L1 REV 4

THIS REVISION SUPERCEDES DRAWINGS BEARING PREVIOUS REVISION NUMBER

GENERAL NOTES

1. THE TERM 'ENGINEER' REFERS TO WEBSTER ENGINEERING LTD. THEIR CONTACT IS FRED CIAMBRELLI AND CAN BE CONTACTED AT 983-0458.
2. ALL CONSTRUCTION IN CITY OF NORTH VANCOUVER RIGHT OF WAY MUST CONFORM TO THE MASTER MUNICIPAL SPECIFICATIONS AND STANDARD DRAWINGS AS MODIFIED BY THE CITY OF NORHT VANCOUVER CONSTRUCTION SPECIFICATIONS (SCHEDULE C OF BYLAW 6200) AND STANDARD DRAWINGS.
3. THE CONTRACTOR SHALL ENSURE THAT ALL APPROVALS REQUIRED FOR THE PROPOSED WORK HAVE BEEN OBTAINED PRIOR TO COMMENCEMENT OF ANY CONSTRUCTION.
4. LOCATIONS OF EXISTING UNDERGROUND SERVICES DETERMINED FROM THE CITY OF NORTH VANCOUVER RECORDS AND UTILITY COMPANIES INFORMATION. CONTRACTOR TO VERIFY THE LOCATION OF ALL EXISTING SERVICES AND TO NOTIFY ENGINEER OF ANY DISCREPANCIES, CONFLICTS OR OMISSIONS PRIOR TO CONSTRUCTION.
5. ALL CUTS IN EXISTING ASPHALT REQUIRED FOR CONSTRUCTION SHALL BE VERTICAL, 115mm DEEP, WITH A DIAMOND SAW AND REPLACED WITH MINIMUM 115mm ASPHALT CONCRETE FOR MAIN ROADS AFTER BACKFILL AND COMPACTION. ALL PAVEMENTS, BOULEVARDS, DRIVEWAYS, FENCES, ETC. ARE TO BE RESTORED TO THE SATISFACTION AND APPROVAL OF THE CITY WHEN NO IMPROVEMENT IS PROPOSED UNDER THIS CONTRACT.
6. THE CONTRACTOR MUST NOTIFY THE ENGINEER 48 HOURS PRIOR TO STARTING OR RESTARTING CONSTRUCTION TO ESTABLISH AN INSPECTION SCHEDULE. HE MUST ALSO CONTACT THE ENGINEER 48 HOURS BEFORE ANY REQUIRED INSPECTION.
7. THE CONTRACTOR SHALL USE EXTREME CARE WHEN WORKING NEAR EXISTING SERVICES AND ANY SERVICES DISTURBED ARE TO BE REPLACED TO THE SATISFACTION OF THE ENGINEER AND THE CITY.
8. THE ENGINEER MUST NOTIFY THE CITY NOT LESS THAN 24 HOURS BEFORE WORK OUTSIDE THE PROPERTY IS STARTED, RESTARTED OR INSPECTIONS ARE REQUIRED.
9. EXISTING ROADWAY NOT INCLUDED IN THESE PROPOSED WORKS SHALL BE KEPT CLEAN AND CLEAR FOR THE DURATION OF CONSTRUCTION AND LEFT IS SAME CONDITION AS PRIOR TO CONSTRUCTION SURROUNDING STREETS SHALL BE SWEPT DAILY IF NECESSARY.
10. TRAFFIC CONTROL TO BE TO THE MINISTRY OF TRANSPORTATION AND HIGHWAYS 'TRAFFIC CONTROL MANUAL FOR WORK ON ROADWAYS'.
11. PEDESTRIANS SHALL BE PROTECTED AT ALL TIMES. ANY CLOSURE OF THE SIDEWALK TO BE COORDINATED WITH THE CITY AT LEAST 48 HOURS AND WITH SURROUNDING PROPERTIES AT LEAST 24 HOURS BEFORE ANY REQUIRED CLOSURE.
12. ENGINEER SHALL PROVIDE CERTIFIED AS-BUILT RECORD INFORMATION TO THE CITY OF NORTH VANCOUVER ENGINEERING DEPARTMENT.
13. DRIVEWAY AND PARKING AREA TO BE COMPACTED TO 95% MODIFIED PROCTOR DENSITY.
14. CATCH BASIN LEADS LEADS TO BE 200mm DIAMETER P.V.C. S.D.R. 35.
15. MINIMUM GRADE ON CATCH BASIN LEADS TO BE 2% UNLESS NOTED OTHERWISE.
16. PIPE BEDDING TO CONFORM WITH THE CNV STANDARDS.
17. CATCH BASIN RIMS TO BE SET 25mm BELOW GUTTERLINE ELEVATION.
18. CATCH BASINS TO BE CNV STANDARD DWG. D3.
19. CHANGES IN GRADE TO BE FORMED WITH SMOOTH CURVES.
20. COMPACTION & CONCRETE TESTING TO BE PERFORMED IN ACCORDANCE WITH THE MASTER MUNICIPAL SPECIFICATIONS.
21. THE CONTRACTOR WILL ROUGHLY GRADE THE BOULEVARDS 100mm BELOW THE PROFILE SHOWN ON THE CROSS SECTIONS.
22. CONCRETE BARRIER CURB TO MMCD STD. DWG C4.
23. CONCRETE DRIVEWAY LETDOWN TO MMCD STD. DWG C7.

WATER PROOFING AND ROOFING SCHEDULES

ROOFING TYPE A

ROOFING ASSEMBLY (WAREHOUSE ROOF)
GRAVEL BALLAST
LOOSE LAID EPDM MEMBRANE
R15 RIGID INSULATION MECHANICALLY FASTENED
SLOPED METAL Ω-DECK

ROOFING TYPE B

ROOFING ASSEMBLY (ROOF DECK)
24" X 24" X 1-1/2" CONCRETE PAVERS ON SETTING PEDESTALS, OR SOIL AS SPECIFIED BY LANDSCAPE ARCHITECT,
PLASTIC DRAINAGE MAT C/W INTEGRAL FILTER FABRIC,
SBS GREEN ROOFING SYSTEM,
PROTECTION BOARD,
R20 RIGID INSULATION
SLOPED METAL DECK TO DRAIN

ROOFING TYPE C

ROOFING ASSEMBLY (OFFICE ROOF)
SBS UV-PROTECTED ROOFING SYSTEM,
PROTECTION BOARD,
R20 RIGID INSULATION
SLOPED METAL DECK TO DRAIN

ROOFING TYPE D

ROOFING ASSEMBLY (BALCONY AND EXTERIOR STAIR LANDINGS)
URETHANE TRAFFIC TOPPING ON
CONCRETE TOPPING
SLOPE FOR DRAINAGE AS SHOWN ON DRAWINGS.

ROOFING TYPE E

ROOFING ASSEMBLY (ENTRANCE CANOPY)
SBS UV-PROTECTED ROOFING SYSTEM,
PROTECTION BOARD,
SLOPED METAL DECK TO DRAINS

FIRE SEPARATION AND RATING LINE TYPES ON PLANS

SMOKE SEPARATION
1 HR. FIRE RESISTANCE RATING (FRR)
2 HR. FIRE RESISTANCE RATING (FRR)
3 HR. FIRE RESISTANCE RATING (FRR)

ANY PENETRATIONS THROUGH THESE AREAS MUST MAINTAIN FIRE RESISTANCE RATING BY ULC APPROVED FIRE STOP SYSTEM AND FIRE DAMPERS TO DUCTWORK.

EXTERIOR WALL TYPES SCHEDULE

NO.	ILLUSTRATION	ASSEMBLY
E1		**E1 TILT-UP CONCRETE WALL - TYPICAL, WAREHOUSE & OFFICES** TILT-UP CONCRETE WALL AS SHOWN STRUCTURAL DRAWINGS. REVEALS AS NOTED ON DRAWINGS.
E2		**E2 TILT-UP CONCRETE WALL - 4 HR FIRE WALL** TILT-UP CONCRETE WALL AS SHOWN ON STRUCTURAL DRAWINGS. REVEAL AS NOTED ON DRAWINGS
E3		**E3 TILT-UP CONCRETE WALL - FEATURE WALL, OFFICES** TILT-UP CONCRETE WALL AS SHOWN STRUCTURAL DRAWINGS. THICKNESS VARIES, AS SHOWN ON DRAWINGS. REVEALS BOTH SIDES, AS NOTED ON DRAWINGS.
E4		**E4 HORIZONTAL RAIN SCREEN CORRUGATED SHEET METAL CLADDING** 7/8" RAIN SCREEN VERTICAL CORRUGATED SHEET METAL CLADDING, 1" AIR SPACE, R12, 2 1/2" RIGID INSULATION WITH NOTCHED TROWEL MASTIC ON BACK SURFACE, WP MEMEBRANE (ACTING AS AIR/VAPOUR BARRIER) , 1/2" WATER RESISTANT FIBRE RE-INFORCED EXTERIOR GYPSUM SHEATHING, 3 5/8" METAL STUDS, 1/2" GWB, SPRAY POLYURETHANE FOAM INSULATION AS CLOSURE TO STUD CAVITY AT GLAZING FRAMES WHERE SUNSHADES AND HSS FRAMES CONNECT TO SHEATHING PLANE. .REFER TO ELEVATIONS AND DETAILS.
E5		**E5 RAIN SCREEN CORRUGATED SHEET METAL PARAPET** 7/8" RAIN SCREEN CORRUGATED PREFINISHED SHEET METAL CLADDING, 1" AIR SPACE, R12 (2 1/2") RIGID INSULATION WITH NOTCHED TROWEL MASTIC ON BACK SURFACE TO TOP OF PARAPET, PEEL & STICK MEMEBRANE (ACTING AS AIR/VAPOUR BARRIER) , 1/2" WATER RESISTANT FIBRE RE-INFORCED EXTERIOR GYPSUM SHEATHING, 3 5/8" METAL STUDS 16" O/C MIN., 5/8" PRESSURE TREATED PLYWOOD SHEATHING, ROOFING MEMBRANE UP AND OVER 1" AIR SPACE 7/8" RAIN SCREEN CORRUGATED PREFINISHED SHEET METAL CLADDING REFER TO ELEVATIONS AND DETAILS.
E6		**E6 FURRED EXTERIOR CONCRETE PANEL INSULATED** CAST IN PLACE TILT-UP CONCRETE PANEL C/W REVEALS AS INDICATED ON ELEVATIONS, 2 " RIGID INSULATION. AIR VAPOUR BARRIER, 2 1/2" METAL STUDS, 1/2" GWB.
E7		**E7 HORIZONTAL RAIN SCREEN CORRUGATED SHEET METAL CLADDING** 7/8" RAIN SCREEN HORIZONTAL CORRUGATED SHEET METAL CLADDING, 1" AIR SPACE, R12, 2 1/2" RIGID INSULATION WITH NOTCHED TROWEL MASTIC ON BACK SURFACE, WP MEMEBRANE (ACTING AS AIR/VAPOUR BARRIER) , 1/2" WATER RESISTANT FIBRE RE-INFORCED EXTERIOR GYPSUM SHEATHING, 3 5/8" METAL STUDS, 5/8" PLYWOOD PAINTED SPRAY POLYURETHANE FOAM INSULATION AS CLOSURE TO STUD CAVITY AT GLAZING FRAMES
E8		**E8 INFILL WALL ABOVE LOADING BAY WALLS** 1/2" WATER RESISTANT FIBRE RE-INFORCED EXTERIOR GYPSUM SHEATHING EACH SIDE OF 6" METAL STUDS, PAINTED TO WAREHOUSE INTERIOR
E9		**E9 FURRED EXTERIOR CONCRETE PANEL INSULATED** CAST IN PLACE TILT-UP CONCRETE PANEL C/W REVEALS AS INDICATED ON ELEVATIONS 1 1/2 " RIGID INSULATION Z GIRTS@24" O.C. AIR VAPOUR BARRIER 1/2" GWB.

EXTERIOR WALL TYPES SCHEDULE

NO.	ILLUSTRATION	ASSEMBLY
W1		**W1 FURRED CONCRETE WALL - INTERIOR LOCATION** CONCRETE WALL, TYPE AS NOTED ON PLANS, FURRED WITH 1/2" GWB ON 7/8" HAT CHANNELS @ 24" O.C. TO 6" ABOVE HEIGHEST CEILING OR TO EXPOSED STRUCTURE ,INTERIOR FINISHES AS SCHEDULED
W2		**W2 FURRED CONCRETE WALL - INTERIOR LOCATION** CONCRETE WALL, TYPE AS NOTED ON PLANS, FURRED WITH 1/2" GWB ON METAL STUDS @ 24" O.C. TO 6" ABOVE HIGHEST CEILING OR TO EXPOSED STRUCTURE
W3		**W3 FURRED CONCRETE WALL - THERMAL INSULATED - INTERIOR LOCATION** CONCRETE WALL, TYPE AS NOTED ON PLANS, FURRED WITH METAL STUDS @ 24" O.C BATT INSULATION 6MIL POLY VAPOUR BARRIER AND R12 BATT INSULAITON 1/2" GWB
W4		**W4 PARTITION WALL TYPICAL INTERIOR** 1/2" GWB EACH SIDE OF 3 5/8" METAL STUDS @ 24" O.C. TO U/S OF DECK ABOVE, ACOUSTIC SEALANT TO METAL DECK
W4A		**W4A PARTITION WALL PARTIAL HEIGHT** 1/2" GWB EACH SIDE OF 3 5/8" METAL STUDS @ 24" O.C. W/ STRUCTURAL POSTS FLOOR TO CEILING STRUCTURE. SEE INTERIOR ELEVATIONS FOR WALL HEIGHT
W4B		**W4B PARTITION WALL TYPICAL ACOUSTIC** 1/2" GWB EACH SIDE OF 3 5/8" METAL STUDS @ 24" O.C. GLASS FIBER BATT INSUL.
W5		**W5 PARTITION WALL 1 HR. RATED ASSEMBLY (ULC W407)** 5/8" TYPE X GWB EACH SIDE OF 3 5/8" METAL STUDS @ 24" O.C. TO U/S OF DECK ABOVE, ACOUSTIC INSULATION. FIRE RATED CAULK BOTH SIDES FULL PERIMETER.
W6		**W6 WASHROOM WALL ACOUSTIC WALL ASSEMBLY** 1 LAYER 5/8" GWB EACH SIDE ON 3 5/8" METAL STUDS TO U.S./ SLAB OVER @ 16" O.C. BATT INSULATION, C/W ACOUSTIC CAULK FULL PERIMETER, BOTH SIDES. ADDITIONAL LAYER 5/8" GWB ON CORRIDOR SIDE.
W7		**WASHROOM WALL ACOUSTIC WALL ASSEMBLY** 1 LAYER 5/8" GWB EACH SIDE ON 6" METAL STUDS @ 16" O.C.BATT INSULATION, C/W ACOUSTIC CAULK FULL PERIMETER. ADDITIONAL L AYER 5/8" GWB ON CORRIDOR SIDE.INSULATE PLUMBING CHASES (1/2" TOLERANCE) FOR ACOUSTICS.
W8		**INSULATED CONCRETE PARTITION WALL** 1/2" GWB WITH 6MIL POLY VAPOUR BARRIER BATT INSULAITON METAL STUDS @ 24" O.C 8" CONCRETE BLOCK WALL
W9		**INSULATED CONCRETE PARTITION WALL** 1/2" GWB WITH 6MIL POLY VAPOUR BARRIER AND R12 BATT INSULAITON ON 3 5/8" METAL STUDS @ 24" O.C., FULL HEIGHT 8" CONCRETE BLOCK WALL
W10		**INSULATED PARTITION WALL** 1/2" GWB WITH 6MIL POLY VAPOUR BARRIER AND R12 BATT INSULAITON ON 3 5/8" METAL STUDS @ 24" O.C., FULL HEIGHT 1/2" GWB
W11		**W11 MASONRY WALL** CONCRETE MASONRY UNITS THICKNESS AS INDICATED ON DRAWINGS.

RECEIVED APR 23 2001 City of North Vancouver Development Services Department

A704

SCALE	PROJECT
AS NOTED	0019
DRAWN: IE	DATE: FEB. 2001

A. GENERAL

1. Structural drawings are to be read in conjunction with other related drawings including existing drawings, for dimensions, elevations and presence of openings, inserts, and mechanical/electrical elements.
2. Prior to commencement of work, contractor shall compare all related drawings; confirm all dimensions and field measure/confirm all existing conditions. Report any discrepancies to the Architect and Engineer of Record ("Engineer" henceforth).
3. If discrepancies relating to structural work are found in the various documents, the more stringent provisions shall apply, unless approved by the Engineer. Specifications shall control over these drawings and General Notes only where the specifications provide for more stringent requirements. Contractor, suppliers and subtrades are to ensure that they are working with the 'Issued for Construction' drawings.
4. Bracing of the structure and all components during construction, including any underpinning, shall remain the sole responsibility of the Contractor.
5. These drawings show requirements for completed structure only. The design and inspection of falsework, shoring and reshoring is the responsibility of the Contractor and shall conform to WCB standards.
6. All shop drawing reviews by the Engineer constitute review for general concepts only; the detailed design remains the responsibility of Contractor/Fabricator. All components shall be assembled and erected in accordance with final reviewed shop and erection drawings. No fabrication/erection shall proceed until review has been completed by the Engineer.
7. Design Loads:

a) Specified uniform loads (u.n.o. on plan)	Live Load	Superimposed Dead loads
Roof (snow load base on)	Ss=2.5 kPa (52 psf) Sr=0.3 kPa (6.3 psf)	0.65 kPa (13.5 psf)
Roof Patio	Per Snow Drift	1.9 kPa (40 psf) paver 0.75 kPa (15 psf) no paver
2nd Floor/3rd Floor	2.4 kPa (100 psf)	3.3 kPa (70 psf)
Main Floor (LL including partition	4.8 kPa (100 psf)	1.2 kPa (25 psf)
Warehouse	19 kPa (400 psf)	0.5 kPa (10 psf)
Stairs, and Lobby	4.8 kPa (100 psf)	2.4 kPa (50 psf)

Superimposed dead loads are non-structural dead loads including architectural topping, partitions, roofing material, pavers, ceiling finishes and mechanical/electrical conduits/fixtures.

b) Seismic and Wind

Seismic is based on Za = 4 Zv = 4
v = 0.2
I = 1.0
SxF = 3.0
R = 2.0

Wind is based on q 1/30 = 0.44 kPa (9.2 psf)
q 1/10 = 0.36 kPa (7.5 psf)

8. These drawings show structural work required to meet provisions of Part 4 of the BCBC 1998.

Seismic design of Secondary component items including their attachment to the structure is the responsibility of others.

9. All codes and documents referred to in these General Notes are to be the latest edition.

B. FIELD REVIEW AND TESTING

1. The Contractor is solely responsible to give the Engineer reasonable advance notice of when structural work is ready for reviews by the Engineer. (Min. 24 hours prior to pour or concealment) Contractor is responsible for reviewing his own work and the work of his subtrades prior to review by the Engineer.
2. All structural work requires written review by the Engineer, including:
   a) Concrete Reinforcement (including concrete tilt-up panels)
   b) Masonry Reinforcement (including non-load bearing partitions)
   c) Structural Steel (including decking)
3. Material testing shall be directed by the Engineer at the expense of the Owner.
4. Concrete testing shall be in accordance with CAN/CSA A23.2-94 and carried out by an independent testing agency approved by the Engineer. Unless permitted by the Engineer, a minimum of 3 test cylinders shall be cast for each 50 cu. meter/50 cu.yards or each day's pour, whichever is less. Test one at 7 days and two at 28 days and submit written reports for review by the Engineer.

   Test reports shall identify the locations where concrete is being tested with gridlines and elevations.
5. The Owner shall appoint an independent CSA certified testing agency to carry out representative testing of bolt torque and welding on structural steel work, including decking. This testing shall take place prior to concealment of all structural steel.
6. The Owner shall appoint an independent CSA certified testing agency to carry out required testing of protective membranes to concrete parkade surfaces where required in accordance with CSA S413 -94.
7. Submit concrete test results max. 24 hours after test.
8. Additional testing and field review resulting from rejection of more than 5% of work will be at the Contractor's expense.

C. FOUNDATIONS

1. Design of foundation is based on soils report of August 21,2000 by Geo Pacific Consultants Ltd. with an allowable bearing pressure of 2000psf on preloaded ground for strip & spread footings. All footings shall bear on soil capable of this pressure without failure or undue settlement. If native soil or fill are found during construction to have a lower allowable bearing pressure, notify the Engineer, and provide revised foundation to the Engineer's specifications.
2. Follow all recommendations given in soils report for preloading, backfill, drainage, sub-base preparation and other requirements.
3. Contractor is solely responsible to ensure that Geotechnical Engineer reviews and confirms allowable bearing pressure and approves subgrade installation prior to pouring concrete for footings foundations.
4. The Owner shall retain an approved testing agency to carry out density testing of subgrade and base material. Testing of subgrade material is to be carried out immediately prior to installation of slab on grade components and during lifts as specified by the Geotechnical Engineer. Care must be taken not to disturb subgrade after approval and prior to pouring concrete.
5. Contractor shall be responsible for all temporary drainage during excavation.
6. Do not backfill retaining walls until cured min. 14 days unless otherwise approved by the Engineer. Consult the Engineer prior to pour to confirm if floor/roof restraint required prior to backfilling.
7. All footings shall be centred on columns and walls unless noted otherwise.
8. Concrete placed under water shall conform to Section 19.6, CAN/CSA-A23.1-94.
9. Provide 50mm (2") thick concrete ground seal under footings/grade beam if required by site conditions.
10. For all elevations and drainage slopes, see Architectural Drawings and requirements identified in the geotechnical report.
11. Unless otherwise noted, design and supervision of excavation, shoring and underpinning of adjacent structures, where required, shall be carried out by a Professional Geotechnical Engineer retained by the Contractor. All costs are to be included in this contract.
12. Where footing elevations vary, follow requirements of typical details shown on drawing. Contractor shall establish footing elevations based on all requirements including maximum slopes, and Electrical, Mechanical and Architectural information.
13. Footing elevations, if shown, are for bidding purposes only, are not final, and may vary according to site conditions. All footings must be taken to a bearing layer approved by the Geotechnical Engineer.
14. Bearing surfaces must be protected from freezing before and after footings are poured.

D. CONCRETE NOTES

1. a) All concrete shall conform to the requirements of CAN/CSA. A23.1- 94. Cement shall be Type 10 Portland Cement unless otherwise noted. Normal weight concrete for various purposes shall be as follows:

ELEMENTS	MIN. 28 DAY STRENGTH MPa(psi)	MAX. SLUMP mm.(inch)	MAX. SIZE AGGREGATE mm.(inch)	EXPOSURE CLASSIFICATION	Fly Ash Content % Total
Foundations and Footings	25 (3600)	75 (3")	20 (3/4")	-	50
Walls (tilt-up)	35 (5000)	75 (3")	20 (3/4")	F2	30
Slabs on grade:					
Exterior/Warehouse	32 (4640)	75 (3")	20 (3/4")	C2	30
Office area	30 (4350)	75 (3")	20 (3/4")	-	50
Topping concrete	30 (4350)	100 (4")	10 (3/8")	-	50
Masonry Grout	20 (3000)	200 (8")	10 (3/8")	-	-

   b) Air contents to meet the requirements of the latest CSA 23.1 Concrete Exposure Classification.

   c) Slumps listed are before the addition of super plasticizers. Tolerance in specified slump shall be ± 20 mm (3/4").

   d) No calcium chloride is permitted in any form in the concrete mixes.

   e) Submit mix designs to the Engineer and testing agency for review and approval prior to placement. Mix design submittals shall identify the elements for which they are intended.

2. Perform all works in accordance with CSA CAN3-A23.1-94, including the following:
   a) Construction Tolerances
   b) Fabrication and placement of reinforcing
   c) Placement of concrete, including proper vibration and curing.
3. Take all precautions to ensure exposed concrete achieves finish desired by the Architect, including proper forming, mix design, site care and adequate vibration. Protect against damage during stripping and entire construction period.
4. See Architectural drawings for slab elevations, drainage, slopes and locations of reglets, reveals and chamfers.

   Unless noted otherwise, exposed corners of slabs, beams, slab bands, columns and walls shall be bevelled 20mm x 20mm (3/4" x 3/4").
5. Blockouts, nailers, conduits, ducts, pipes, sleeves and other openings are subject to approval by the Engineer.

   a) Openings and conduits are not permitted in wall zones, within 990 mm (39") of wall ends and intersections and columns.

   b) Where permitted, space openings 2 diameters, or minimum 150 mm (6") apart.

   c) Single openings larger than 300 mm (12") or a group of openings occupying together more than 300X300mm (1.0 sq. ft.) in any 1 sq. meter (10 sq. ft.) area shall not be permitted without the approval of engineer.
6. Expansion and/or construction sequence joints shall be installed in concrete structures greater than 45m (150 ft.) in length, details and locations shall be discussed with and approved by the Engineer in writing prior to construction.
7. Stripping of forms for structural elements is not allowed until concrete strength has reached 12 MPa for columns and walls and 17 MPa for slabs and beams. Strength of concrete shall be determined from field-cured cylinders.
8. All hot and cold weather concrete work shall be carried out in accordance with CAN/CSA A23.1-94
   a) When temperature is expected to fall between 3°C and -10°C within 3 days of pouring concrete, the Contractor shall carry out one or more of the following procedures:
      i) Make provisions to heat mix water or aggregate to maintain a minimum concrete temperature of 10°C.
      ii) Make provisions to heat the form work or soil surface. Concrete shall not be poured against any surface with a temperature less than 3°C. (Calcium chloride or other de-icing salts are not permitted.)
      iii) Cover concrete with insulation blanket for the first 36 hours after pouring concrete. Do no pour when temperature is expected to fall below -10°C within 3 days after pouring.
      iv) Make provisions for a heated enclosure to maintain the temperature of all concrete surfaces above 10°C for a minimum of 3 days after the pour.
      v) Provide alternate mix designs for cold weather.
   b) When the temperature is expected to rise above 25°C the Contractor shall:
      i) Make provisions to cool concrete to maintain a max. temperature of 30°C.
      ii) Make provisions to prevent concrete from drying.
9. Take measures to minimize shrinkage cracking including covering and dampening concrete in the curing stage.
10. Unless otherwise noted, provide 3.2mm wide x T/4 deep(1/8" x T/4) deep control joints in two directions in grade slabs centred on column lines, and maximum at 4500mm (15 ft.) o.c.
11. Unless otherwise noted, where expansion anchors are required, use Hilti KB II or approved equal; where chemical anchors are required, use Hilti HIT HY150 epoxy, or approved equal.

E. REINFORCING NOTES

1. Reinforcing shall be new billet steel conforming to the following standards:
   a) 10M and larger CSA G30.18-M92 400 Mpa
   b) Weldable reinforcement CSA G30.18-M92 (welding to CSA W186-M1990)
   c) Welded wire mesh CSA G30.5-M1983 (R1991)
   d) Epoxy coated reinforcement ASTM A775M-91

   Note: weldable reinforcement (including deformed bar anchors) must be clearly identified on each piece.
2. Reinforcement shall have concrete protection as follows, unless otherwise noted.:

	Fire Resistance Rating 0-2 hrs.	3 hrs.
a) All surfaces placed in contact with ground	75mm (3")	75mm (3")
b) Formed surfaces exposed to ground or weather	50mm (2")	50mm (2")
c) Walls	32mm (1 1/4")	32mm (1 1/4")
d) Column ties - interior	40mm (1 1/2")	50mm (2")
e) Column ties - exterior	50mm (2")	50mm (2")
f) Slabs	25mm (1")	40mm (1 1/2")
g) Slab bands and Beams	40mm (1 1/2")	50mm (2")
h) Parking slab - top	40mm (1 1/2")	40mm (1 1/2")
- bottom	25mm (1")	40mm (1 1/2")
i) Slab on grade (from top of slab)	40mm (1 1/2")	-----
j) Other, unless otherwise noted	40mm (1 1/2")	40mm (1 1/2")

3. All reinforcing bars shall be accurately placed, chaired and tied securely to prevent displacement and to maintain the specified cover. Install column reinforcement accurately with templates. Provide hooked dowels from bottom of footing to match and lap with verticals. Install masonry dowels accurately to align with centre of walls. Chairs shall be protected against rusting where required for appearance. Do not wet dowel reinforcement unless approved by the Engineer.
4. Provide epoxy coated rebars where noted on plan in accordance with CAN/CSA S413-94. Chair bars with plastic chairs and tie with plastic coated wire.
5. Minimum reinforcement shall be as follows unless otherwise noted:
   a) Wall reinforcement:
      150mm (6") wall - 10M @ 300 (12") VERT., 10M @ 300 (12") HOR.
      200mm (8") wall - 15M @ 450 (18") VERT., 15M @ 450 (18") HOR.
      250mm (10") wall - 15M @ 400 (16") VERT., 15M @ 400 (16") HOR.
      300mm (12") wall - 10M @ 450 (18") VERT., EACH FACE STAG.
      10M @ 300 (12") HOR., EACH FACE STAG.

   b) Slab reinforcing (or temperature reinforcing)
      100mm (4") 10M @ 500 (20") o.c. TWO WAYS
      125mm (5") 10M @ 400 (16") o.c. TWO WAYS
      150mm (6") or less 10M @ 300 (12") o.c. TWO WAYS
      175mm (7") 15M @ 500 (20") o.c. TWO WAYS
      190mm to 215mm (7 1/2" to 8 1/2") 15M @ 450 (18") o.c. TWO WAYS
      225mm to 250mm (9" to 10") 15M @ 400 (16") o.c. TWO WAYS
      275mm to 300mm (11" to 12") 15M @ 350 (14") o.c. TWO WAYS

   c) Footing reinforcement:
      2-15M continuous plus dowels of same size and spacing as wall vertical reinforcing.

   d) Other locations: 15M @ 400 (16")
6. All bars shall be continuous, properly lapped at splices. At corners and intersections; horizontal reinforcement shall be bent and lapped.
7. a) Unless otherwise noted, lap lengths, including dowels, for 400 MPa (58 Ksi) reinforcement shall be as follows:

10M - 400mm (16")	Epoxy coated bars:	10M - 500mm (20")
15M - 600mm (24")		15M - 750mm (30")
20M - 750mm (30")		20M - 980mm (39")
25M - 1170mm (46")		25M - 1530mm (60")
30M - 1400mm (55")		30M - 1840mm (72")

   b) Lap splices not shown on drawings shall not be allowed unless approved in writing by the Engineer.
8. Unless otherwise noted, openings in walls shall have 2-15M extra each side extending 600mm (2'-0") past corners, plus 1-15M x 1200mm (4'-0") diagonal each corner.
9. Welding of reinforcing to embedded plates is permitted only with weldable deformed bar anchors with the following fillet weld sizes:
   10 (3/8")@---6mm (1/4")
   16 (5/8")@---10mm (3/8")
   20 (3/4")@---12mm (1/2")
10. Provide contingency reinforcing additional to all other requirements, with "add" and "delete" unit prices included in bid. Include reinforcing required for non-structural concrete and masonry shown on the various drawings.

F. TILT-UP PANELS

1. Refer to concrete and reinforcing notes for concrete work in tilt-up panels.
2. Provide min. 2-15M bars at each side of openings, extend 600mm (2'-0") past edge. Provide 1-15M corner bar x 1200mm (4'-0") at all openings larger than 600mm (2'-0"). Chair all reinforcing with plastic tipped chairs. Do not use curry bars.
3. Tie lifting and bracing inserts securely to reinforcing steel.
4. Provide shop drawings 1:50 (1/4"=1'-0") for each panel type. Show all construction details including:
   a) Concrete outline and opening locations.
   b) Location and details of embedded items.
   c) Reinforcing details.
   d) Lifting and bracing requirements (including seal by a P.Eng. registered in B.C.)
5. Panel lift design shall conform to the following:
   a) Use computer based methods to locate lifting inserts for min. flexural stresses. Conform to WCB IH&S 3.4.3.4.
   b) Required concrete strength at time of lift:
      Flexural 2.9 Mpa (420PSI)
      Compressive 17 MPa (2500 PSI)
   c) Minimum safety factor on lift inserts 2.5:1.
   d) Provide reinforcing steel to carry loads when working flexural stresses exceed 1.7MPa (250 PSI).
   e) Indicate on drawings where flexural stress exceeds 2.9MPa (420 PSI).
6. Provide temporary bracing for panels until permanently attached to building as detailed. Design bracing for 0.7 kPa (14psf) wind load on gross panel area with a min. safety factor of 1.67.
7. Unless noted otherwise, chamfer all exposed (outside) corners, all joints shall be 20mm (3/4") wide.
8. Panels shall be viewed from interior of building as numbered on plans.
9. All embeds shall be secured to formwork with a minimum 2-4.8mm (3/16") nails.
10. Grout fill all recesses and pockets in panels, and gaps between floor slab and panels with a flowable consistency non-shrink grout with a minimum 7 day strength of 35 MPa (5000 psi). Follow the manufacturer's specification and instructions for mixing and placement of grout.
11. Steel trowel finish all inside surfaces of panels, unless noted otherwise.

G. STRUCTURAL STEEL/METALS

1. All structural steel work shall conform to CAN/CSA S16.1-M94.
2. All structural steel material shall conform to CSA G40.20/G40.21 -1992 with the following grades:
   a) Rolled shapes and plates -300W
   b) HSS shapes -350W
   c) Bolts -ASTM A325
   d) Anchor bolts and miscellaneous hardware -ASTM A307
3. All welding shall conform to CSA W59-1989 and to be performed by welders under CSA W47.1-92, fabricators to CWB approval. Welds shall be E-70xx. Nelson stud welding shall meet specifications of the manufacturer.
4. Unless otherwise noted, apply one shop coat of primer to all steel work, to CISC/CPMA 1-73A. Primer for exterior exposure shall be zinc-chromate Type 1, conforming to CGSB1-GP-40d.
5. Where required, all hot dip galvanizing shall conform to CSA G164.M92
6. Unless otherwise noted, design structural steel connections for minimum half the shear or compression capacity of the members connected (Design by the Fabricator's Engineer). Bolted connections shall consist of minimum 2-19mmø (3/4"ø) A325 bolts with 9mm (3/8") connector plate.
7. Submit shop drawings (4 sets) for the above to the Engineer for review prior to fabrication. Shop drawings shall show all details, and indicate all applicable design loads and material specifications and shall be sealed by the Fabricator's B.C. Registered Engineer.
8. All fabrication and welding exposed to view to be appearance quality to the Architect's satisfaction.

H. OPEN WEB STEEL JOISTS

1. Open web steel joists, bridging, and connections shall be designed, manufactured, and supplied according to CAN/CSA S16.1-M94 (S136 for cold rolled) for dimensions and loads shown on the drawings.
2. Design for deflections and provide camber to CSA S16 unless otherwise noted.
3. Where bottom chord extensions are required, design for minimum 13.0 kN (3000 lbs) factored axial tension or compression.
4. Paint OWSJ and bridging with one coat of primer to CISC/CPMA 1-73A.
5. Unless otherwise noted, bridging locations shall be coordinated with all other Architectural and Mechanical requirements.
6. Submit shop drawings (4 sets) for the above to the Engineer for review prior to fabrication. Shop drawings shall show all connections and details, and indicate all applicable design loads and material specifications and shall be sealed by a Professional Engineer registered in the Province of B.C. The same P.Eng. shall submit sealed letter stating that fabrication of the open web steel joists have met all structural requirements.
7. Following fabrication and erection, the sub-contractor shall retain a P.Eng. registered in B.C. to review installation of the open web steel joist structure and submit a sealed letter stating that installation of same meets all structural requirements.

J. STEEL DECKING

1. Steel roof decking and floor decking shall be as per plan. Roof decking shall conform to CSSBI 10M-86; composite floor decking shall conform to CSSBI 12M-84. Interior decking shall have a minimum zinc coating of Z275 to CSSBI 10M-84. Exterior decking shall have a minimum zinc coating of Z275 to the same standard. The following decking profiles are acceptable :
   Roof :- Mercury RD BC/D-Rib, and RD900 or Vicwest RD308 and RD38.
   Floor :- Mercury QL BC/D-Rib, and QL900 or Vicwest HB308 and HB38.
2. Unless otherwise noted, as a minimum, weld deck to supports and perimeter elements with 20mm (3/4") puddle welds @300mm (12"), button punch laps @ 300mm (12") o.c. maximum. Place sheets in minimum 3 span lengths.
3. Paint welds and repair damaged coating with Galvacon coating.
4. a) Unless otherwise noted, reinforce all roof deck openings greater than 150mm (6") square and less than 400mm (18") square with L38x38x5 (L1 1/2"x1 1/2"x3/16") extended and puddle welded to minimum two flutes on each side of opening. Frame larger openings with L75x75x6 (L3"x3"x1/4") extending to main structural members or as shown on the drawings.

   b) Unless otherwise noted, provide L100x100x6 (L4"x4"x1/4") frame under all roof top mechanical units. Contractor shall be responsible to coordinate the number and locations of mechanical units with the mechanical consultant.
5. Unless otherwise noted, reinforce all floor deck openings greater than 150mm (6") square and less than 400mm (18") square with 3-10M, 4-sides of opening, extend bars 200mm (8") min. past edge of opening, plus 1-10M x 600mm (24") at each corner. Frame larger openings with L100x100x6 (L4"x4"x1/4") extending to main structural members or as shown on drawing.
6. Shop drawings for decking (4 sets) shall be submitted for review prior to fabrication and are to be sealed by a Professional Engineer registered in B.C. Shop drawings shall show all details and indicate all applicable design loads and material specifications.

K. SECONDARY COMPONENTS AND THEIR ATTACHMENTS

1. Secondary components include but are not limited to the following:
   a) Architectural components such as guard and hand rails, flag posts, canopies, ceilings, etc.
   b) Site work elements exterior to the base building such as landscaping components, lamp standards, pools, signs, and civil work.
   c) Cladding, window mullions, glazing and store fronts.
   d) Skylights and glass canopies.
   e) Attachments and bracing for electrical and mechanical components.
   f) Glass block including attachments.
   g) Elevators.
   h) Architectural precast and precast cladding.
   i) Window washing equipment and attachments.
   k) Interior and exterior light gauge steel stud walls.
   l) Roofing material.
   m) Architectural brick veneer.
   n) Parking slab membrane.
   o) Storage racks.
2. Design and detailing of the above items and their attachments are not the responsibility of the Engineer. They shall be designed by specialty structural engineers, registered in the province of British Columbia retained by the Contractor, who will seal all related shop drawings, review the components in the field and provide all required sealed letters to the authorities having jurisdiction.
3. Secondary or non-structural components and their attachments shall be designed in accordance with Part 4 of the same Building Code as in GENERAL section, line 8 of this drawing.
4. Sealed shop drawings of the secondary or non-structural components which may affect the primary structural system shall be submitted to the Engineer only for the review of their effect on the primary structural system.
5. Subcontractor of these components is responsible for protection of aluminum-steel connections against galvanic corrosion.
6. In addition to construction tolerance, non-structural components shall be detailed for the following building movement and deflection:
   a) Vertical deflections of beams, slabs and decking: ± 25mm (1")
      Differential deflections of edge beams and edges of slabs: ± 16mm (5/8")
   b) Horizontal drift during wind and earthquake between floors:
      Drift without damage to non-structural components: ± 13mm (1/2")
      Drift without collapse of non-structural components: ± 50mm (2")
   c) Movement at expansion joints:
      Perpendicular: ± 50mm (2")
      Parallel: ± 50mm (2")
      Vertical: ± 25mm (1")

5	COMPOSITE DECKING 2 1/2" CONC TOPPING ON 3"x22 GA HB DECKING TOTAL THICKNESS 5 1/2"	FASTEN TO GLULAM SUPPORT WITH 6-1/4"@x3" LAG SCREWS AT EACH FLUTE. PUDLE WELD TO STEEL SUPPORT EVERY OTHER FLUTE OR 12" O.C.
6	COMPOSITE DECKING 2 1/2" CONC TOPPING ON 1 1/2"x22 GA HB DECKING TOTAL THICKNESS 4"	WELD EVERY 2ND FLUTE TO SUPPORT

LEGEND

Vf=c – FACTORED SHEAR FORCE FOR CONNECTION

Tf=Cf – FACTORED TENSION AND COMPRESSION FOR CONNECTION

NOTES TO OWSJ

1) SEE ADDITIONAL NOTES ON DRAWING S01

2) DESIGN LOADS (SPECIFIED):

a) ROOF SNOW: 48 psf PLUS BUILD UP AS SHOWN
b) FACTORED TENSION OR COMPRESSION ON TOP CHORDS AS PER PLANS.
c) ADDITIONAL LOAD FROM MECHANICAL UNITS INCLUDING A 100mm THICK HOUSEKEEPING PAD, SEE MECHANICAL DRAWINGS FOR LOCATIONS AND WEIGHTS.
d) NET UPLIFT OF 0.50 kPa (UNFACTORED).
e) POINT LOAD OF 45 kN ANYWHERE ALONG THE LENGTH OF THE JOIST.
f) ADDITIONAL POINT LOADS AS PER CLAUSE 16.6 IN CAN 3-S16.1-92
g) SEE DRAWING S03 FOR FLOOR LIVE LOADS.

3) DEFLECTION CRITERIA:

a) ROOF AREAS: L/300

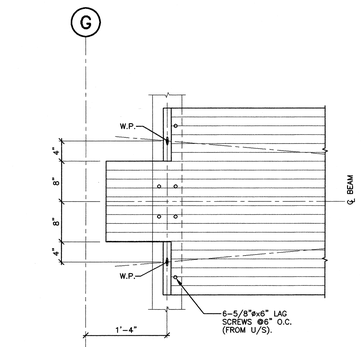
1/S04 TYP. COMPOSITE GLULAM/STEEL TRUSS (ELEVATION)
1/4"=1'-0"



PLAN
1"=1'-0"

NOTES TO CUSTOM TRUSSES:

1. TRUSS CONTRACTOR TO CHECK AND CONFIRM ALL DIMENSIONS PRIOR TO FABRICATION, INCLUDING COORDINATION WITH STEEL SHOP DRAWINGS, AND AS-BUILT LOCATIONS OF SUPPORTS AND ADJACENT STRUCTURES. SUBMIT STEEL, TIMBER SHOP DRAWINGS FOR REVIEW BY THE ARCHITECT AND ENGINEER PRIOR TO FABRICATION.
2. ALL GLULAM MEMBERS TO BE SAND FINISHED AND TO BE FREE OF STAINING, GRADE STAMPS, ETC. STORE TIMBER UNDER COVER AND PROTECT FROM DAMAGE & STAINING.
3. ALL STEEL TO BE 300W (44ksi) IN ACCORDANCE WITH GENERAL NOTES ON DRAWING S1. WELD TO BE FULL STRENGTH PREPARED WELDS.
4. REFER TO GENERAL NOTES AND OTHER DRAWINGS FOR ADDITIONAL REQUIREMENTS.
5. ALL STEEL HARDWARE TO BE PAINTED OR GALVANIZED IN ACCORDANCE WITH ARCHITECTS SPECIFICATIONS.
6. ALL WORK TO BE ARCHITECTURAL QUALITY, INCLUDING PRECISION CUTTING AND FITTING, STEEL WELDING, ETC. TAKE PRECAUTIONS TO AVOID DAMAGE AND STAINING OF WOOD DURING CONSTRUCTION PROCESS.
7. WORK POINTS SHOWN ARE TO CENTRELINE OF MEMBERS UNLESS OTHERWISE NOTED.
8. WASHERS & COUNTERSUNK HOLES FOR RODS/BOLTS (AS APPLICABLE) TO BE AS FOLLOWS:

ROD/BOLT	WASHER SIZE	COUNTERSINK
5/8" & 3/4"ø	2 1/2"ø x 1/4" BEARING ON WOOD	3/4"
5/8" & 3/4"ø	1"ø x 3/16" BEARING ON STEEL	–

9. PRE-DRILL FOR ALL LAG SCREWS WITH HOLES PER CSA-086
10. WHERE PRACTICAL, SHOP FIT INITIALLY FABRICATED MEMBERS EARLY DURING FABRICATION ON A TRIAL BASIS. REVIEW WITH ENGINEER PRIOR TO PROCEEDING FURTHER.

NOTE A: FIRE ALARM FOR LOW BUILDING (B.C.)

1. WITHIN EACH FIRE COMPARTMENT PROVIDE SEPARATE ANNUNCIATION FOR SMOKE DETECTORS, HEAT DETECTORS, MANUAL PULL STATIONS, SMOKE DAMPERS AND SPRINKLER RISERS.
2. WIRE TO ALARM SUPPLIERS SPECIFICATIONS.
3. FIRE ALARM INSTALLATION TO COMPLY WITH CAN 4 – S 524, NATIONAL BUILDING TABLE 3.2.4A AND LOCAL BYLAWS.
4. FIRE ALARM SYSTEM TO BE ZONED AND SUPERVISED, STAIRS AND ELEVATOR TO HAVE SEPARATE ZONES AS REQUIRED.
5. FIRE ALARM TO HAVE MINIMUM OF 2 BELL OR SPEAKER CIRCUITS PER FLOOR IN SEPARATE CONDUIT.
6. FOR EXACT NUMBER OF DEVICES, SEE FLOOR PLANS.
7. FIRE ALARM CABINET TO HAVE PROVISION FOR CONNECTING TO "OFF PREMISE" MONITORING AUTHORITY; SYSTEM SHALL BE CONNECTED TO MONITORING AUTHORITY.
8. SEE ELECTRICAL SPECIFICATIONS.
9. ELECTRICAL CONTRACTOR TO WIRE AND CONNECT MOTORIZED DAMPER AS REQUIRED BY MECHANICAL SPECIFICATIONS. ANNUNCIATE AND CONNECT TO C.C.F. AS REQUIRED C/W OVERRIDE AND INDICATOR PILOT LIGHT. DAMPER PILOT LIGHT TO BE ACTIVATED BY DAMPER END SWITCH, FOR POSITIVE STATUS INDICATION.
10. PROVIDE A SMOKE DETECTOR AND A HEAT DETECTOR ON A SINGLE ZONE IN THE MAIN HIGH VOLTAGE ELECTRICAL ROOM. THIS ZONE SHALL SHUT DOWN ALL VENTILATION FANS TO THIS ROOM. ALL TO BE IN ACCORDANCE WITH BUILDING CODE CLAUSE 3.2.4.8.(1)(b). (NOT REQUIRED IN LOW VOLTAGE ROOMS)
11. THE ELECTRICAL CONTRACTOR TO PROVIDE A BUILDING GRAPHIC TO THE APPROVAL OF THE ARCHITECT, AND THE LOCAL FIRE AUTHORITY PRIOR TO PROCESSING.
12. ADDRESSABLE AND MICROPROCESSOR SYSTEMS SHALL BE WIRED WITH CLASS A RETURN LOOP CONNECTIONS.
13. THE "END OF LINE" RESISTORS SHALL BE GROUPED IN THE TYPICAL FLOOR ELECTRICAL CLOSETS AND LABELLED PER ZONE AND FUNCTION. THEY SHALL NOT BE SCATTERED ON LOBBY AND CORRIDOR WALLS.
14. THE FIRE ALARM SYSTEM SHALL INCLUDE THE COMPLETE WIRING AND ANNUNCIATION OF ALL SPRINKLER SYSTEM MONITORING DEVICES AS OUTLINED IN BCBC 3.2.4.16.(5)(a)to(g). LOCATIONS SHALL BE TO LATER DETAIL IN SPRINKLER DESIGN. THE ELECTRICAL CONTRACTOR MUST COORDINATE WITH THE DIVISION 15 SPRINKLER DESIGN TO CONFIRM COUNT AND LOCATION OF ALL FLOW SWITCHES AND SUPERVISORY MONITORING AND PROVIDE ALL NECESSARY WIRING AND CONTROLS IN THE FIRE ALARM SYSTEM.
15. REMOTE ANNUNCIATORS AT FIRE FIGHTERS ENTRY AND CONTROL AREA SHALL BE c/w ALL FUNCTIONS SUCH AS SILENCING AND RESETTING.
16. ANNUNCIATORS LOCATED OUTDOORS SHALL BE EQUIPPED WITH A HEATER KIT TO PREVENT CONDENSATION.
17. ANNUNCIATOR SHALL BE MOUNTED SO THAT THE TOP READOUT OR CONTROL WILL NOT BE HIGHER THAN 1800mm (70") ABOVE FINISHED FLOOR.
18. THE FIRE PUMP SHALL BE SUPERVISED TO INDICATE RUNNING AND FIRE PUMP TROUBLE IN THE F.A. ANNUNCIATOR, TO CONFORM WITH NFPA 13-7.2.2.2.
19. THE E.M. GENERATORS SHALL BE SUPERVISED TO INDICATE GENERATOR RUNNING AND GENERATOR TROUBLE AT THE ANNUNCIATOR.

6501 230695

NOTE D: SPRINKLER /FIREALARM INTERFACE

1. SYMBOLS
   - (A) VALVES C/W SUPERVISORY SWITCH , WIRING TO BE CONNECTED TO FIRE ALARM PANEL AND ANNUNCIATED FOR TROUBLE.
   - (B) DOMESTIC COLD WATER PIPE TO BE HEAT TRACED BY QUALIFIED ELECTRICAL PERSONEL UNDER THE RESPONSIBILITY OF THE CONTRACTOR IN DIV. 15. DIV. 16 TO PROVIDE CIRCUITS TO PANEL "EMM" IF SUCH A PANEL IS PROVIDED, OTHERWISE CONNECT CIRCUITS TO PANEL "M".
   - (C) PIPE TO BE HEAT TRACED BY QUALIFIED ELECTRIC PERSONEL UNDER THE RESPONSIBILITY OF THE PLUMBING CONTRACTOR HEAT TRACING FOR STANDPIPES AND SPRINKLER TO BE SUPERVISED ELECTRICALLY BY DIV. 15 ELECTRIC PERSONEL AND CONNECTED TO ANNUNCIATOR PANEL BY THE DIV. 16 ELECTRICAL CONTRACTOR. DIV. 16 TO PROVIDE CIRCUITS TO PANEL "EMM" IF SUCH A PANEL IS PROVIDED, OTHERWISE CONNECT CIRCUITS TO PANEL "M".
   - (D) SPRINKLER FLOW SWITCH AND TROUBLE TO BE SUPERVISED AT THE FIRE ALARM PANEL AND ANNUNCIATED.
2. HEAT TRACE AND CONTROL DEVICES TO BE SUPPLIED AND INSTALLED BY ELECTRICAL PERSONEL UNDER THE RESPONSIBILITY OF THE DIVISION 15 MECHANICAL CONTRACT.
3. TESTING AND ACCEPTANCE SHALL BE BY MECHANICAL DIVISION 15.

6504 070395

NOTE F: FIRE ALARM, EXIT & EMERGENCY LIGHTING SYSTEMS VERIFICATION

1. CONTRACTOR SHALL RETAIN A PROFESSIONAL ELECTRICAL ENGINEER REGISTERED IN THE PROVINCE OF BRITISH COLUMBIA, CANADA TO PROVIDE VERIFICATIONS OF THE FIRE ALARM SYSTEM AND THE INSTALLATION OF EXIT AND EMERGENCY LIGHTING SYSTEM IN ACCORDANCE WITH THE BRITISH COLUMBIA BUILDING CODE 1992. ALL COSTS ASSOCIATED WITH PERFORMANCE OF THIS ITEM SHALL BE INCLUDED.
2. A REVIEW AND TEST OF THE FIRE ALARM AND ASSOCIATED SYSTEMS SHALL BE ORGANIZED AS FOLLOWS:
   a) AFTER THE FIRE ALARM HAS BEEN VERIFIED.
   b) TWO WEEKS PRIOR TO ISSUANCE OF LETTER OF ASSURANCE.
   c) TIMING SHALL BE ARRANGED BY GENERAL CONTRACTOR FOR REVIEW TO BE PLACED DURING "NON-WORKING HOURS".
   d) REVIEW TO INCLUDE PERSONNEL FAMILIAR WITH THE PROJECT FROM:
      GENERAL CONTRACTOR
      ELECTRICAL CONTRACTOR
      MECHANICAL CONTRACTOR
      FIRE ALARM SUPPLIER
      ELECTRICAL CONSULTANT
      MECHANICAL CONSULTANT
      CERTIFIED PROFESSIONAL (IF APPLICABLE)
   e) ALL TESTING EQUIPMENT AND MATERIAL SHALL BE PROVIDED BY THE CONTRACTORS AND SUBTRADES.

6506 140696

NOTE Y: EXIT SIGNS

EXIT SIGNS TYPICAL THROUGHOUT, ALL FLOORS – FINAL LOCATION AND MOUNTING HEIGHT OF ALL EXIT SIGNS TO TAKE INTO ACCOUNT VISIBILITY REQUIREMENTS OF EXIT SIGNS FROM A DISTANCE WHERE INTRAVENING STRUCTURE, MECHANICAL AND ELECTRICAL SERVICES MAY OTHERWISE OBSTRUCT VISIBILITY OF EXIT SIGNS, IF THEY ARE MOUNTED IN EXACT CONFORMANCE WITH THIS LAYOUT, ALLOW FOR ALL NECESSARY COSTS TO ADJUST LOCATION OF EXIT SIGNS TO ALLOW VISIBILITY TO THE SATISFACTION OF THE ARCHITECT, FIRE MARSHALL AND CERTIFIED PROFESSIONAL AS DETERMINED ON SITE.

6523 150894

NOTE I: DISTRIBUTION AND MISCELLANEOUS ITEMS

1. INSTALL A PROPER DRAINAGE SYSTEM FOR ANY UNDERGROUND CONDUITS.
2. PROVIDE ADEQUATE CLEARANCE AROUND UNIT SUBSTATION AND DISTRIBUTION CUBICLES, MAIN SERVICE EQUIPMENT, SUB-DISTRIBUTION METER CENTRES AND OTHER ELECTRICAL EQUIPMENT IN ACCORDANCE WITH BULLETIN 2-7-0.
3. GROUND ALL UTILITY SUPPLY PULL BOXES AS PER C.E.C. TABLE #17.
4. PROVIDE PERMANENT MARKERS FOR THE CABLES CONNECTED TO THE GROUND PAD.
5. PROVIDE CONDUCTOR SUPPORTS ON ALL RISER RACEWAYS IN ACCORDANCE WITH TABLE 21.
6. ENSURE THAT DOUBLE TUB PANELS ARE FACTORY APPROVED FOR THE APPLICATION.
7. PROVIDE 1.5 METER CLEARANCE BETWEEN EQUIPMENT ON OPPOSITE WALLS IN THE ELECTRICAL ROOM.
8. ENCASE SERVICE CONDUITS IN CONCRETE TO COMPLY WITH BULLETIN 6-4-0.
9. DO NOT RUN P.V.C. CONDUIT ON THE SURFACE IN BUILDINGS OF NON-COMBUSTIBLE CONSTRUCTION (BRITISH COLUMBIA BUILDING CODE). E.M.T. OR RIGID GALVANIZED STEEL CONDUIT MAY BE USED.
10. DO NOT USE PROCESS PIPING IN LIEU OF C.S.A. APPROVED CONDUIT.
11. ENSURE THAT ADDITIONAL SEALS ARE PROVIDED IN EACH RUN OF CONDUIT ENTERING OR LEAVING A CLASSIFIED AREA.
12. VENTILATED ELECTRICAL EQUIPMENT IN SPRINKLERED ELECTRICAL ROOM REQUIRES SHIELDING. (NOTE: GENERALLY SPRINKLERS CAN BE ELIMINATED FROM ELECTRICAL ROOMS IF THEY ARE CONSTRUCTED WITH A 3-HOUR FIRE RATING).
13. PROVIDE SMOKE DETECTOR WITH AUXILIARY CONTACT TO STOP ELECTRICAL ROOM VENTILATION FANS WHEN SMOKE DETECTOR IS ACTIVATED.

6511 280396

NOTE HH: CONDUITS PIPES & SLEEVES EMBEDDED IN CONCRETE

EMBEDDING OF PIPES, CONDUITS AND SLEEVES IN CONCRETE SHALL BE ALLOWED ONLY IN THE SLABS OF SPECIFICALLY DESIGNATED LEVELS, IF INSTALLED IN ACCORDANCE WITH THE FOLLOWING GUIDELINES. ARRANGE A SITE MEETING WITH ELECTRICAL CONSULTANT, ELECTRICAL CONTRACTOR, STRUCTURAL ENGINEER PRIOR TO THE PLACEMENT OF ANY ELECTRICAL CONDUIT.

1. THE ELECTRICAL CONTRACTOR SHALL PROVIDE, WITHIN 25 CALENDAR DAYS OF CONTRACT SIGNING, A COMPLETE RED LINE DETAIL OF ALL CONDUIT ROUTING AND SLEEVING FOR REVIEW AND APPROVAL OF ALL CONSULTANTS.
2. CENTERLINE SPACING TO BE NOT LESS THAN 3 DIAMETERS MIN. 50mm (2") CLEAR.
3. CENTERLINE SPACING BETWEEN PARALLEL CONDUIT AND REINFORCING BARS TO BE 3 DIAMETERS MIN. 50mm (12") CLEAR.
4. SUBMIT LAYOUT OF CONDUITS AT POINTS OF CONGESTION FOR COORDINATION OF REINFORCING AND/OR RE-ROUTE AS DIRECTED BY THE STRUCTURAL ENGINEER AT NO ADDITIONAL COST.
5. FOR SHEAR WALLS
   A) MAXIMUM CONDUIT DIAMETER SHALL BE 1/10.
   B) MINIMUM SPACING SHALL BE THE LESSER OF 1.5t OR 15d.
   C) CONDUITS SHALL BE CONTAINED BETWEEN THE TWO CURTAINS OF STEEL IN WALL 300mm (12") AND THICKER.
   D) NO CONDUITS ALLOWED IN OR WITHIN 300mm (12") OF CONCENTRATED ZONE REINFORCING.
   E) NO CONDUITS ALLOWED IN SHEAR WALL HEADERS UNLESS SHOWN ON STRUCTURAL DRAWINGS.
   F) t = WALL THICKNESS d = CONDUIT DIAMETER
6. FOR SLABS AND WALLS – (CONDUITS IN THE PLANE OF)
   A) LOCATE BETWEEN TOP AND BOTTOM OR EACH FACE OF REINFORCING.
   B) MAXIMUM SIZE IN ONE LAYER TO BE NOT MORE THAN 1/4 CONCRETE THICKNESS.
   C) MAXIMUM TOTAL SIZE OF CONDUITS CROSSING SHALL BE NOT MORE THAN 0.3 THE CONCRETE THICKNESS.
   D) THREE OR MORE LAYERS CROSSING WILL NOT BE PERMITTED.
7. FOR COLUMNS – OBTAIN APPROVAL OF THE STRUCTURAL ENGINEER. CONDUIT AND FITTINGS IN EXCESS OF 2% OF THE COLUMN AREA WILL NOT BE ALLOWED. EMBEDDED PIPING WILL NOT BE ALLOWED.

6532 300894

NOTE G: STRUCTURAL AND FEEDERS

1. ELECTRICAL CONTRACTOR IS TO REFER TO STRUCTURAL NOTES ON STRUCTURAL DRAWINGS RE WIRING METHODS AND SIZING OF CONDUCTORS IN RELATION TO THE STRUCTURAL REQUIREMENTS. ALL WORK IS TO BE CONCEALED. THIS WORK IS CONSIDERED WITHIN THE BASE CONTRACT, THERE WILL BE NO EXTRAS CONSIDERED FROM ANY DISCIPLINE TO MEET THIS CRITERIA.
2. ELECTRICAL CONTRACTOR TO SUBMIT REDLINE MARKUP DRAWINGS OF THE GROUPED CONDIT RUNS TO BE PLACED IN CONCRETE, PRIOR TO INSTALLATION TO BE USED AS SHOP DRAWINGS FOR REVIEW BY ALL CONSULTANTS.

6507 030898

NAMETAGS ADDITIONAL REQUIREMENTS:

1. ALL RECEPTACLE OUTLETS ARE TO HAVE LAMICOID NAMETAG ON COVER PLATE INDICATING PANEL AND CIRCUIT DESIGNATION.

NOTE Q: B.C. HYDRO & B.C. TELEPHONE

1. B.C. TELEPHONE SERVICE DUCTS SHALL BE PVC TYPE DBII (ORANGE).
2. B.C. HYDRO RACEWAYS ARE TO BE CSA APPROVED EITHER FOR DIRECT BURIAL OR FOR CONCRETE ENCASEMENT AND SIZED AS PER DRAWING.
   A. PRIMARY RACEWAYS:
      a) TO KIOSKS – NO CONCRETE REQUIRED BUT ADDITIONAL SAND COVER IS REQUIRED.
      b) TO BUILDINGS (VAULTS, UNIT SUBSTATIONS, ETC.)
         – MUST BE CONCRETE ENCASED.
   B. SECONDARY RACEWAYS:
      a) EXTERNAL TO A BUILDING – NO CONCRETE REQUIRED UNLESS:
         i) UNDER A DRIVEWAY AND LESS THAN 36" BELOW DRIVEWAY GRADE.
         ii) UNDER GRADE PARKING SLABS WHICH ARE LESS THAN 4" THICK.
      b) WITHIN A BUILDING – MUST BE CONCRETE ENCASED.
3. ALL PRECAST PULL BOXES, KIOSK PADS, JUNCTION BOXES AND RACEWAYS SHOWN ON THE PROPERTY ARE TO BE SUPPLIED AND INSTALLED BY THE ELECTRICAL CONTRACTOR AND SUBJECT TO THE REQUIREMENT OF B.C. HYDRO REPRESENTATIVE AND B.C. TELEPHONE REPRESENTATIVE. RACEWAY INSTALLATION SHALL BE IN ACCORDANCE WITH CEC SECTION 6-300, 12-92 AND TABLE 53 c/w IDENTIFICATION MARKERS AND TO THE REQUIREMENTS OF LOCAL AUTHORITIES HAVING JURISDICTION.
4. KIOSK GROUNDING, HIGH VOLTAGE WIRING AND SECONDARY WIRING TO LINE SIDE OF MAIN SWITCH IS SUPPLIED AND INSTALLED BY B.C. HYDRO FORCES
5. KIOSK GROUNDING MATERIAL IS SUPPLIED BY B.C. HYDRO. E.C. TO RECEIVE AND INSTALL.
6. B.C. TELEPHONE CABLING IS SUPPLIED AND INSTALLED BY B.C. TELEPHONE FORCES.
7. ELECTRICAL CONTRACTOR TO CONFIRM HYDRO AND TELEPHONE SERVICE ENTRIES AND DISTRIBUTION. ARRANGE FOR ALL PERMITS AND INSPECTIONS BY BOTH ELECTRICAL AND UTILITY AUTHORITIES. B.C. HYDRO INSPECTION IS REQUIRED ON ALL SERVICE ENTRY DUCTS PRIOR TO COVER. CALL B.C. HYDRO CIVIL DEPARTMENT (328-8566).
8. ALL WORK TO BE DONE ACCORDING TO ELECTRICAL STANDARD ESS4 S2-01.01 TO ESS4 S2-01.14 INCLUSIVE & ESS4 F3-04.01 TO ESS4 F3-04.04 INCLUSIVE.
9. ALL RACEWAYS SHALL BE DRAINED WITH T-FITINGS AT THE LOW POINT AND AT ENTRY TO BUILDING.
10. ALL RACEWAYS SHALL BE SEALED WITH DUCT-SEAL AT ENTRY TO BUILDING.

6515 021298

NOTE U: PRICING

1. B.C. HYDRO CHARGES BY OWNER.
2. B.C. TEL CHARGES BY OWNER.
3. REFER TO FIXTURE SCHEDULE FOR LIGHTING FIXTURES AND LAMPS.
   E.C. TO INCLUDE RECEIVING, UNCRATING & INSTALLATION OF ALL LIGHTING, FIXTURES, AND LAMPS IN BASE PRICE. E.C. SHALL ALSO INCLUDE IN HIS BASE PRICE FOR ADMINISTRATING THE FIXTURE PURCHASE AS DIRECTED BY THE OWNER.
4. REFER TO T.V. NOTES FOR T.V. CABLE CHARGES.
5. REFER TO TELEPHONE NOTES FOR TELEPHONE CABLE CHARGES.
6. ALL ELECTRIC HEATERS, KICK SPACE HEATERS, RELAYS, L.V. TRANSFORMERS AND LINE VOLTAGE THERMOSTATS AS REQUIRED TO BE SUPPLIED AND INSTALLED BY ELECTRICAL CONTRACTOR. THE DESIGN IS BASED ON STANDARD DENSITY UNITS. THERMOSTATS TO BE PROVIDED IN EACH ROOM WHERE THERE IS A BASEBOARD HEATER.
7. REFER TO VERIFICATION OF FIRE PROTECTION OF EMERGENCY CONDUCTORS FOR ON SITE REVIEW CASH ALLOWANCE.

6519 010595

NOTE LL: TELEPHONE

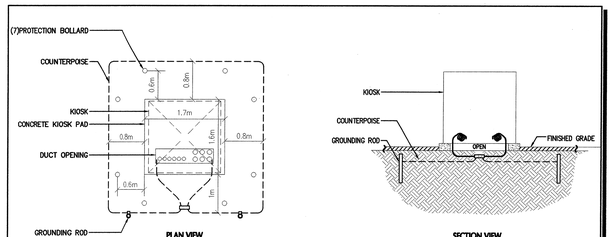
1. WIRE TO MANUFACTURER'S SPECIFICATIONS.
2. ALL TELEPHONE CONDUIT MUST BE PROVIDED WITH A WATERPROOF STRING.
3. PULL BOXES MUST BE PROVIDED IF THE LENGTH OF THE CONDUIT FOR INSIDE TELEPHONE WIRES EXCEEDS 100 FT. (30M) OR IF THERE ARE MORE THAN TWO 90° BENDS.
4. L.B. BENDS ARE NOT ACCEPTABLE.
5. FOR EXACT NUMBER OF OUTLETS SEE FLOOR PLANS.
6. CHARGES FOR THE SUPPLY AND INSTALLATION OF TELEPHONE CABLES AND FINISHING DEVICES, FOR EQUIPMENT BEYOND THE DEMARCATION POINT TO BE PAID BY OWNER.

6535 120795

NOTE E: MECHANICAL

1. GENERALLY THE ELECTRICAL CONTRACTOR SHALL BE RESPONSIBLE FOR THE ELECTRICAL CONNECTIONS FROM STARTERS TO EQUIPMENT MOTORS, AND:
   A. ALL DISCONNECT SWITCHES OR LOCK-OUT STATION AT MOTOR LOCATIONS WHERE REQUIRED BY CODE.
   B. WIRING TO LINE VOLTAGE THERMOSTAT AND PRESSURE SWITCHES FOR FORCED FLOW UNIT AND UNIT HEATERS, WIRING TO PRESSURE SENSING ON FLOAT DEVICES FOR SUMP PUMPS, ETC., WIRING OF ELECTRIC HEATING ELEMENTS AND ASSOCIATED THERMOSTATS.
   C. WIRING TO ALTERNATORS FOR PUMPS WHERE SPECIFIED.
   D. PROVIDE 15 AMP. CIRCUIT WHERE REQUIRED FOR CONTROLS.
   E. SUPPLY AND INSTALLATION OF THE PROPER SIZE OVERLOAD HEATERS IN THE MAGNETIC STARTERS AND THERMAL OVERLOAD SWITCHES.
   F. WIRING AS REQUIRED FOR OPERATION OF MOTORIZED DAMPERS ON FIRE EMERGENCY CONDITIONS.
   G. COORDINATE WITH MECHANICAL INSTALLER AND PROVIDE A 1/2" CONDUIT c/w 3/18 PVC FROM WATER METER TO REMOTE READER ON EXTERIOR WALL.

6505 110594



NOTES:
1. KIOSK PAD MUST BE 3'-0" FROM ANY FENCE, PROPERTY LINE OR NON COMBUSTIBLE BUILDING WITH NO OPENINGS (IE. NO WINDOWS OR DOORS).
2. KIOSK PAD MUST BE 10'-0" FROM ANY COMBUSTIBLE BUILDING WITH NO OPENINGS.
3. KIOSK PAD MUST BE 20'-0" FROM ANY BUILDING WITH OPENINGS.
4. COUNTERPOISE MUST BE 10'-0" FROM ANY SUBSURFACE CONDUCTIVE MATERIALS SUCH AS LIGHT BASES OR REINFORCED CONCRETE WALLS (EPOXY COATED REBAR IN REINFORCED WALLS IS THE EXCEPTION) AND 12" FROM ANY OTHER OBSTRUCTION.
5. THE COUNTERPOISE MUST BE PLACED INSIDE THE PROPERTY.
6. CONFIRM PAD CONFORMS TO LOCAL POWER AUTHORITY'S STANDARDS.
7. BOLLARDS MUST BE TO B.C. HYDRO REQUIREMENTS C/W PVC COVER.
8. ALL REBAR WITHIN 1.5M, MUST BE EPOXY COATED.

PROFESSIONAL ENGINEER PROVINCE OF BRITISH COLUMBIA R. J. WONG

RECEIVED FEB 23 2001 City of North Vancouver Development Services Department

E-8

SCALE	PROJECT
N.T.S.	8109
DRAWN: DRF/DM	DATE: FEB. 5, 2001

Plot Date: February 19, 2001 – 8109

NOTE AA:

GROUNDING TO BE PROVIDED AS REQUIRED BY SECTION 36 C.E.C.

GENERAL NOTES

1. CONFIRM METERING ARRANGEMENT WITH THE POWER SUPPLY AUTHORITY.
2. WIRE SIZED FOR RW90 COPPER.
3. QMQB BOARD OR GUTTER AND SWITCHES ACCEPTABLE AS SPACE AND/OR BUS BRACING ALLOWS.
4. ✓ DENOTES THAT FUSE TO HOLD LOCKED ROTOR CURRENT FOR 30 SECONDS.
5. ✳ DENOTES TIME DELAY BUSS FRSR FUSE FOR 600V DISTRIBUTIONS AND BUSS FRNR FUSE FOR 250V DISTRIBUTIONS.
6. FPL (MGFR-1200 (VERY INVERSE TIME) GROUND FAULT RELAY OR APPROVE EQUAL RELAY MUST BE OF A VERY INVERSE CHARACTERISTIC AND BE CAPABLE OF BEING SET AT 1200 AMPS PICKUP AT 1 SECOND. SETTING CLEAR THE FAULT AT 1000 AMPS.

7A. FUSE SPECIFICATION 120/208 120/240 VOLTS

1. MAINS AND FEEDERS

a) SERVICE ENTRANCE MAINS AND FEEDER FUSES OVER 800 AMPERES SHALL BE BUSSMANN HRC-L TYPE KRP-C WITH '0' RING SEAL BETWEEN THE END BELLS AND THE GLASS MELAMINE FUSE BARREL. TERMINALS OF FUSE TO BE GLASS PEENED.

b) ALL MAINS AND FEEDERS, 70 THROUGH 800 AMPERES, PROTECTING CIRCUIT BREAKERS, SHALL BE BUSSMANN HRC-T TYPE JJN. THE FUSES AND BREAKERS SHALL BE A CSA APPROVED SERIES TESTED COMBINATION. LABELING OF THE EQUIPMENT MUST BE APPLIED PER THE CANADIAN ELECTRICAL CODE RULE #14-014.

c) ALL OTHER MAINS AND FEEDERS, 15 AMPS THROUGH 600 AMPS, OTHER THAN THOSE PROTECTING CIRCUIT BREAKERS, SHALL BE HRC-J TIME-DELAY TYPE LPJ-amps SP.

d) ALL FUSE SHALL BE OF THE SAME MANUFACTURER TO FACILITATE SELECTIVE COORDINATION OF THE SYSTEM.

2. MOTORS

ALL MOTORS SHALL BE PROTECTED BY BUSSMANN HRC-J TIME-DELAY TYPE LPJ-amps SP HRC J FUSES. THESE FUSES SHALL BE SIZED AT 150% OF MOTOR FULL LOAD AMPERES FOR STANDARD DUTY, AND 175% FOR HEAVY DUTY. FUSES SHALL PROVIDE "NO DAMAGE" PROTECTION TO THE MOTOR STARTER FOR ALL SHORT CIRCUIT CURRENTS UP TO 100,00 AMPERES RMS.

3. TRANSFORMER

THE PRIMARY FUSES PROTECTING 600 TO 120/208 VOLT TRANSFORMERS, SHALL BE BUSSMANN HRC1-R, DUAL ELEMENT, TIME -DELAY TYPE FRS-R FUSES. THE FUSES SHALL BE SIZED AT 125% OF THE TRANSFORMER FULL LOAD CURRENT IN ACCORDANCE WITH THE CEC RULE 26-256. THE FUSE SHALL BE CAPABLE OF HANDLING 15 TIMES THE TRANSFORMER FULL LOAD CURRENT FOR 0.1 SECONDS.

7B. FUSE SPECIFICATION 600/347 VOLTS

1. MAINS AND FEEDERS

a) SERVICE ENTRANCE MAINS AND FEEDER FUSES OVER 600 AMPERES SHALL BE BUSSMANN HRC-L TYPE KRP-C WITH '0' RING SEAL BETWEEN THE END BELLS AND THE GLASS MELAMINE FUSE BARREL. TERMINALS OF FUSE TO BE GLASS PEENED.

b) ALL MAINS AND FEEDERS, 15 THROUGH 400 AMPERES, PROTECTING CIRCUIT BREAKERS, SHALL BE BUSSMANN HRC-J TYPE LPJ. THE FUSES AND BREAKERS SHALL BE A CSA APPROVED SERIES TESTED COMBINATION. LABELING OF THE EQUIPMENT MUST BE APPLIED PER THE CANADIAN ELECTRICAL CODE RULE #14-014.

c) ALL OTHER MAINS AND FEEDERS, 15 AMPS THROUGH 600 AMPS, OTHER THAN THOSE PROTECTING CIRCUIT BREAKERS, SHALL BE HRC-J TIME-DELAY TYPE LPJ-amps SP.

2. MOTORS

ALL MOTORS SHALL BE PROTECTED BY BUSSMANN HRC-J TIME-DELAY TYPE LPJ-amps SP HRC J FUSES. THESE FUSES SHALL BE SIZED AT 150% OF MOTOR FULL LOAD AMPERES FOR STANDARD DUTY, AND 175% FOR HEAVY DUTY. FUSES SHALL PROVIDE "NO DAMAGE" PROTECTION TO THE MOTOR STARTER FOR ALL SHORT CIRCUIT CURRENTS UP TO 100,00 AMPERES RMS.

THE PRIMARY FUSES PROTECTING 600 TO 120/208 VOLT, OR 600 TO 120/240 VOLT TRANSFORMERS, SHALL BE BUSSMANN TYPE HRC1-R, DUAL ELEMENT, TIME DELAY TYPE FRS-R FUSES. THE FUSES SHALL BE SIZED AT 125% OF THE TRANSFORMER FULL LOAD CURRENT IN ACCORDANCE WITH THE CEC RULE 26-256. THE FUSE SHALL BE CAPABLE OF HANDLING 20 TIMES THE TRANSFORMER FULL LOAD CURRENT FOR 0.1 SECONDS.

7C. GROUND FAULT RELAYS

__ 1. GROUND FAULT RELAYS (One level)

THE MAIN GROUND FAULT RELAY SHALL BE FPL TYPE MGFR-1200 INVERSE TIME BAND SET AT 1200 AMPERES ONE SECOND INVERSE TIME. ALL FEEDERS OVER 600 AMPERES SHALL BE EQUIPPED WITH GROUND FAULT RELAYS TYPE FPL MGFR-1200 SET AT 1200 AMPERES 0.1 SECOND INVERSE TIME BAND. ALL FEEDER SWITCHES 600 AMP AND SMALLER SHALL BE EQUIPPED WITH BUSSMANN FUSES TYPE LPJ WHICH MEET THE GROUND FAULT REQUIREMENTS OF THE CEC RULE 14-102-(2).

GROUND FAULT RELAYS THAT ARE AN INTEGRAL PART OF OVER CURRENT RELAYS WILL NOT BE ACCEPTABLE BECAUSE OF THEIR INABILITY TO SELECTIVELY COORDINATE WITH DOWN STREAM PROTECTIVE DEVICES.

PROVIDE ZERO SEQUENCE CURRENT TRANSFORMERS ENCIRCLING ALL PHASES AND NEUTRAL CONDUCTORS. GROUND STRAP CURRENT TRANSFORMERS ARE NOT ACCEPTABLE AS UNDER CODE THEY RESTRICT THE MAXIMUM RELAY SETTING TO 1000 AMPERES.

2. GROUND FAULT RELAYS (Two level)

THE MAIN GROUND FAULT RELAY SHALL BE FPL TYPE MGFR-1200 (VERY INVERSE TIME) SET AT 1200 AMPERES ONE SECOND INVERSE TIME BAND. FEEDERS GROUND FAULT RELAYS, FPL TYPE MGFR-1200 SET AT 1200 AMPERES 0.1 SECOND INVERSE TIME BAND, SHALL BE PROVIDED FOR ALL FEEDER SWITCHES OVER 600 AMPERES. ALL FEEDER FUSES SHALL BE BUSSMANN TYPE JJN OR LPJ AS SHOWN ON THE DRAWINGS.

GROUND FAULT RELAYS THAT ARE AN INTEGRAL PART OF OVER CURRENT RELAYS WILL NOT BE ACCEPTABLE BECAUSE OF THEIR INABILITY TO SELECTIVELY COORDINATE WITH DOWN STREAM PROTECTIVE DEVICES.

PROVIDE ZERO SEQUENCE CURRENT TRANSFORMERS ENCIRCLING ALL PHASES AND NEUTRAL CONDUCTORS. GROUND STRAP CURRENT TRANSFORMERS ARE NOT ACCEPTABLE AS UNDER CODE THEY RESTRICT THE MAXIMUM RELAY SETTING TO 1000 AMPERES.

7D. ONLY "APPROVED" SERIES RATED COMBINATION TO BE USED.

8. ANY REQUEST FOR USE OF ALTERNATE PROTECTION DEVICES SHALL BE ACCOMPANIED BY A FULL COORDINATION STUDY AND FAULT CURRENT CALCULATION ONE FULL CALENDAR WEEK PRIOR TO CLOSE OF TENDER FOR REVIEW BY THE ENGINEER.
9. MINIMUM TRANSFORMER IMPEDANCE TO BE 6%.
10. (M) – PROVIDE CABINET C/W REMOVABLE SIDE FOR FUTURE METERING AND LAMICOID LABEL TO READ "CHECK METER PROVISIONS".
11. (FR) – INDICATES CABLES OVERSIZED TO SUSTAIN SHORT TERM TEMPERATURE RISE.
12. PROVIDE SPARE FUSE CABINET AND THREE SPARE FOR EACH TYPE AND SIZE. (SEE SECTION 16163.2.5)
13. THE FAULT LIMITATIONS FOR SERIES RATED COMBINATIONS MUST COMPLY WITH CEC 14-014.

BASE FEEDER SCHEDULE

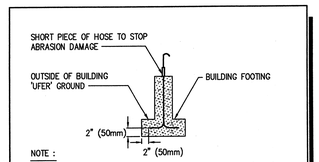
1. EXCEPT AS NOTED ON THE ONE-LINE THE FOLLOWING BASE FEEDERS SHOULD BE PROVIDED:

FUSE/BREAKER SIZE:	CONDUIT & WIRE SIZE:
30A	3/4" - 4#10 RW90
40A	3/4" - 4#8 RW90
50/60A	1 1/4" - 4#6 RW90
70/80A	1 1/2" - 4#4 RW90
100A	1 1/2" - 4#3 RW90
125A	2" - 4#1 RW90
150A	2" - 4#1/0 RW90
175A	2 1/2" - 4#2/0 RW90
200A	2 1/2" - 4#3/0 RW90
250A	3" - 4#250MCM RW90
300A	2 x 2" - 4#1/0 RW90
400A	2 x 2 1/2" - 4#3/0 RW90
500A	2 x 3" - 4#250MCM RW90
600A	2 x 3" - 4#300MCM RW90
700A	2 x 3 1/2" - 4#350MCM RW90
800A	2 x 4" - 4#500MCM RW90
1000A	3 x 3 1/2" - 4#350MCM RW90
1200A	3 x 4" - 4#500MCM RW90
1400A	4 x 4" - 4#400MCM RW90
1600A	4 x 4" - 4#500MCM RW90
2000A	6 x 4" - 4#500MCM RW90

2. CONDUCTOR SIZE FOR HYDRAULIC ELEVATORS TO BE 200% OF THE LISTED C.E.C., UNLESS OTHERWISE NOTED.

FEEDERS AND DISTANCES

DISTANCE	FEEDER
0.0-75 FT	BASE
75-150 FT	INCREASE ONE SIZE FROM BASE
150-200 FT	INCREASE TWO SIZES FROM BASE



NOTE :

PROVIDE AND INSTALL 75'-0" (23M) OF 3/0 BARE COPPER 'UFER' GROUND IN THE BUILDING FOOTINGS. COMPRESSION CRIMP THE CONDUCTORS TO RE-BAR IN THE FOOTINGS OF EVERY 20'-0" (6M), EXTEND 'UFER' GROUND PIGTAILS TO MAIN SWITCH.

SYMBOL SCHEDULE

NOTES:
- BX AND NON METALLIC CABLE MAY BE USED WHERE PERMITTED BY CODE
- ALL WIRE DESIGNATED SHALL BE COPPER ONLY.
- ALL CONDUCTORS SHALL BE #12 UNLESS OTHERWISE NOTED.
- ALL 15 AMP CIRCUITS OVER 100'-0" (30 METERS) TO BE #10 THROUGHOUT UNLESS OTHERWISE NOTED.
- MOUNTING HEIGHTS SHOWN ON DRAWINGS SUPERCEDE MOUNTING HEIGHTS SHOWN ON SYMBOL SCHEDULE. ELECTRICAL CONTRACTOR TO VERIFY MOUNTING HEIGHTS WITH SITE CONDITIONS.

THE ELECTRICAL CONTRACTOR SHALL PROVIDE VAPOUR BARRIERS AT ALL OUTLETS IN EXTERIOR WALLS & CEILINGS THAT HAVE INSULATION AND BARRIERS BY FITTING THE OUTLETS WITH PROTECTOR PLATES AND OUTLET BOX BARRIERS, AS MANUFACTURED BY IDEAVALLE OR HUBBELL. THE PROTECTOR PLATES SHALL SUPPORT THE BOX BARRIERS TO ENSURE A GOOD SEAL.

MECHANICAL SCHEDULE

NOTES
A. CONFIRM FINAL LOCATION AND POSITION OF ALL MECHANICAL EQUIPMENT PRIOR TO ROUGH-IN
B. CONFER WITH MECHANICAL PLANS AND SPECIFICATION TO COORDINATE AND PROVIDE FOR ALL FIRE MEASURE CONTROLS AND MONITORING AS REQUIRED AT THE FIRE ALARM CONTROL CENTRE.
C. ALL MOTORS SHALL BE FITTED WITH A DISCONNECT SWITCH BY DIVISION 16.
D. ALL CONDUCTORS SHALL BE #12 RW90 AND LARGER AS REQUIRED BY MCA & VOLTAGE DROP.
E. ELECTRICAL CONTRACTOR TO REFER TO MECHANICAL DRAWINGS AND SPECIFICATIONS AND:
   a) PROVIDE OUTLETS AS REQUIRED FOR 'HEAT TRACE'.
   b) PROVIDE 'WIRING' AND CONNECTION AS REQUIRED FOR MECHANICAL EQUIPMENT INCLUDING DAMPER CONTROL.
F. ALL PARKADE FANS SHALL BE PROVIDED WITH LOCKABLE DISCONNECT SWITCHES.
G. ALL THREE PHASE MOTOR STARTERS TO HAVE SINGLE PHASE PROTECTION.

REMARKS
1. PROVIDE A SEPARATE EM CIRCUIT FOR ALARM CONTROL(S) C/W CONNECTIONS TO FLOATS AND REMOTE ALARM IN THE LOBBY.
2. CONTROLLED BY REDUCED VOLTAGE STARTER AS SUPPLIED BY MECH. (DIV. 15) & INSTALLED BY ELEC. (DIV. 16).
3. PROVIDE G.F.I. PROTECTION TO CODE.
4. PROVIDE AND INSTALL A LOCK AND KEY AT THE DISCONNECT SWITCH.
5. PROVIDE A SMOKE DETECTOR ZONE IN THE FIRE ALARM TO SHUT DOWN FAN WHEN SMOKE IS DETECTED.
6. INTERLOCK WIRING TO DDC BY DIV. 15.
7. CONTROL WIRING BY DIV. 15.

E = COMPLETE INSTALLATION BY DIV. 16
M = COMPLETE INSTALLATION BY DIV. 15
C = SUPPLIED + MOUNTED BY DIV. 15 AND WIRED BY DIV. 16
B = CONDUIT BY DIV. 16 AND WIRING BY DIV. 15

FIXTURE SCHEDULE

NOTES
1. LIGHTING IS DESIGNED TO COMPLY WITH ENERGY CODE. THE CONTRACTOR SHALL NOT CHANGE LIGHTING WITHOUT ENGINEERS APPROVAL.
2. PARKADE LIGHTING LOCATED IN SPRAY-ON INSULATION SHALL BE SET DOWN TO CLEAR THE INSULATION.
3. LIGHTING IN MECHANICAL ROOMS TO BE SUSPENDED AS NECESSARY TO CLEAR MECHANICAL LINES AND DUCTS.
4. LIGHTING IN SPRINKLER MECHANICAL ROOMS AND ELECTRICAL ROOMS SHALL BE ON EM POWER.
5. SURFACE MOUNTED WALL LIGHTS SHALL NOT BE SET LOWER THAN 6'-8" (2050mm) TO CENTER OF OUTLET BOX WITHOUT SPECIAL PERMISSION FROM ELECTRICAL INSPECTOR.
6. ALL RECESSED LIGHTS LOCATED IN INSULATED CEILINGS MUST BE SUPPLIED C/W I.C. RATED HOUSINGS.
7. ANY CONTRACTOR PROPOSED ALTERNATE LIGHT FIXTURE IN LIEU OF SPECIFIED SHALL BE SUBJECT OF APPROVAL BY THE DESIGNER AND ENGINEER. SUBMIT A BREAKDOWN OF COST SHOWING THE NET DIFFERENCE TO THE DEDUCTED OR ADDED TO THE TENDER PRICE IF ACCEPTED. INCLUDE FOR AND ASSUME RESPONSIBILITY FOR ANY ADDITIONAL COST INCURRED BY OTHER DISCIPLINES AND TRADES, RESULTING FROM SUBSTITUTION AS WELL AS LIGHTING SYSTEM PERFORMANCE.

SPRINKLER PERFORMANCE SPECIFICATIONS

1. BUILDING SHALL BE ENTIRELY SPRINKLERED IN ACCORDANCE WITH THE DIVISION B SPRINKLER SYSTEM SPECIFICATIONS, NFPA 13, AND NFPA 231C STANDARDS SPRINKLER SYSTEM SHALL BE HYDRAULICALLY DESIGNED BASED ON THE FOLLOWING CRITERIA:

AREA	SYSTEM	DENSITY GPM/FT 2	DESIGN AREA (FT2)	HAZARD GROUP	MAX AREA PER HEAD (ft2)
OFFICE AREAS	WET	Ø.1Ø	195Ø	LIGHT	225
MECHANICAL/ SERVICE	WET	Ø.16	15ØØ	ORD. GROUP 1	13Ø
WAREHOUSE	WET	NFPA 231C	12 HEADS	ESFR SYSTEM	-
STORAGE	WET	Ø.1Ø	15ØØ	LIGHT	225

2. PROVIDE SEISMIC SWAY BRACING IN ACCORDANCE WITH NFPA 13 AND B.C. BUILDING CODE ON STANDPIPE AND SPRINKLER SYSTEM.
3. REVIEW MECHANICAL, STRUCTURAL AND ARCHITECTURAL DRAWINGS FOR DETAILS AND CO-ORDINATE CO-ORDINATE FINAL PIPE ROUTES WITH OTHER SUB-TRADES AND GENERAL CONTRACTOR BEFORE START OF SHOP DRAWINGS.
4. WAREHOUSE TO BE HYDRAULICALLY DESIGNED TO NFPA-231C REQUIREMENTS FOR HIGH PILED RACK STORAGE USING 30" HIGH WAREHOUSE HEIGHT WITH 25'-0" HIGH RACKS FOR CLASS IV COMMODITIES (ENCAPSULATED) USING K-14 HEADS PROVIDE 75 PSIG AT HEAD, USING K-25 HEADS PROVIDE 30 PSIG @ HEAD.
5. PROVIDE 1½" HOSE CONNECTIONS IN WAREHOUSE C/W Ø0Ø' OF HOSE AS PER SCHEMATIC DRAWINGS.
6. PROVIDE ADDITIONAL HEADS UNDER OBSTRUCTION IN WAREHOUSE AS NECESSARY TO MEET ESFR SYSTEM REQUIREMENTS.
7. WAREHOUSE TO BE DESIGNED FOR ESFR SYSTEM. NO IN RACK SPRINKLER SYSTEM WILL BE CONSIDERED AS EQUIVALENT.
8. PROVIDE FIRE EXTINGUISHERS THROUGHOUT BUILDING TO NFPA-1Ø REQUIREMENTS. ALLOW FOR FULLY RECESSED CABINETS TO BE COORDINATED WITH ARCHITECTURAL.

VEL JOB# 6195-00

PROFESSIONAL ENGINEER E. SMITH

MAY 31 2001

RECEIVED
MAY 31
City of N. Vancouver
Development Services Department

M-6

OF 7

SCALE:	PROJECT:
AS NOTED	6195-00
DRAWN: -	DATE: -

1.1 INTENT

1. The intent of this specification and drawings is to provide a complete and fully operating mechanical system in complete accord with applicable codes. The Mechanical Contractor shall make provisions for labour, material and equipment necessary to complete the mechanical work.

1.2 EXISTING CONDITIONS

1. The work shall include the relocation or connection onto existing piping as indicated. Make good equipment, insulation and piping damaged or disturbed during the work to match existing.

2. Protect all existing services encountered. Arrange work to avoid shutdowns of existing services. Where interruptions are unavoidable, obtain approval for timing of shutdowns from Landlord and coordinate with authorities (i.e. Fire Department) where fire protection services are interrupted.

3. Drawings indicate general locations of existing services. Verify exact locations of services on site prior to fabrication of work.

1.3 LIABILITY

1. Assume responsibility for laying out work and for damage caused to the Owner or others by improper execution of work.

2. Protect finished and unfinished work from damage.

3. Take responsibility for condition of materials and equipment supplied and protect until work is completed and accepted.

1.4 CERTIFICATES

1. Give notices, obtain permits, and pay fees so work specified may be carried out. Furnish certificates, if requested, as evidence that work conforms with laws and regulations of Authorities having jurisdiction.

1.5 CUTTING AND PATCHING

1. Give locations for holes for mechanical equipment and provide sleeves required for the mechanical installations.

2. Be responsible for cutting and patching of building structure required by work unless otherwise indicated.

1.6 TESTING

1. Test equipment and materials where required by Authorities having jurisdiction, to demonstrate proper operation.

1.7 GUARANTEE

1. Provide the Landlord with a written guarantee warranting apparatus furnished to remain in serviceable condition for a period of one (1) year from date of final acceptance by the Landlord and the Tenant.

1.8 STANDARD OF MATERIALS AND WORKMANSHIP

1. Make and quality of materials used are subject to approval by the Engineer and the Tenant. Remove condemned materials and install suitable materials in their place.

2. Materials shall be new and of uniform pattern throughout, where specifically identified in this specification. This is for the purpose of establishing a standard of quality of materials and workmanship and not to limit selection.

3. Workmanship shall follow the best tradition and tradesmanship. Employ only tradesmen properly licensed for work requiring tradesmen with special skill.

1.9 SHOP DRAWINGS

1. Submit 3 copies of shop drawings for rooftop equipment, sprinklers, thermostats, fans, air outlets and plumbing fixtures to the Engineer for review including all performance data, physical dimensions, electrical data and operating weights.

1.10 RECORD DRAWINGS

1. Keep on site an extra set of white prints and specifications, recording changes and deviations daily. Upon completion of work, submit record drawings to the Engineer. Before Total Performance, turn marked up white prints over to Consultant. Allow $750.00 for Consultant to transfer site changes to original tracings and provide Owner 3 sets of "record drawings" prints and one copy of drawings on AutoCAD diskette.

1.11 MAINTENANCE MANUALS

1. Provide 3-8 1/2" x 11" catalogue binders .
One copy of final manuals to remain with Consultant during warranty period.

1.12 FIELD REVIEW

1. The Mechanical Contractor shall notify the Engineer, in writing, of start up of work, 50% completion and 100% completion for field review purposes.

2. Balancing report to be submitted to Engineer before Substantial Completion Field Review is performed.

2. IDENTIFICATION

1. Provide identification systems for materials used in mechanical systems which require control by Workplace Hazardous Materials Information system (WHMIS) issued by Occupational Safety and Health Division of Worker's Compensation Board of British Columbia in accordance with classification and application requirements of WHMIS standards for the following general categories:

2. Provide safety data sheets and labels to WHMIS standards for materials required. Provide copy of safety data sheets in Mechanical Maintenance Manuals.

3. Provide for identification of piping with markers showing service and direction of flow. Apply labels at maximum 50'-0" intervals, before and after passing through walls, at access door openings, at each shut off valve and adjacent to each piece of equipment. Labels shall be waterproof and heat resistant with yellow background, minimum 1" lettering and dry adhesive backing. Provide 3M No. 76 adhesive in addition to dry adhesive backing.

4. Provide 2" wide colour band of plastic pressure sensitive tape for piping systems. Obtain colour schedule from Consultant. Spacing shall be same as labels.

5. Provide 3/4" diameter brass number tags or "Altiex" plastic tags with number stamped in black, secured to valve wheel with key chain for valves not in sight of apparatus controlled. Provide typewritten valve directory giving number, service and location. Include in Maintenance Manuals.

6. Provide lamicoid labels with 1/2" letters on equipment and motor starters.

3. BALANCING

3.1 INTENT: Perform work as an integral part of contract.

3.2 QUALITY ASSURANCE

1. Acceptable Balancing Firms: KD Engineering Co., Inland Technical Services and Western Mechanical Services Ltd.

2. Procedures shall be in accordance with current edition of AABC's National Standards for Field Measurement and Instrumentation, Total System Balance.

3.3 INSTRUMENTS: Instruments for testing and balancing of air and hydronic systems shall have been calibrated within six months and verified for accuracy before start of work.

3.4 PROCEDURES

1. General: Before balancing, review with Contractor methods and instruments to be used. Provide and include descriptive data, procedure data and performance data sheets in the balancing report.

2. Data sheets required are as follows:

1. Air Moving Equipment Test Sheet
2. Exhaust Fan Test Sheet

3. Balance to maximum flow deviation from specified values of 10% at terminal device and 5% at equipment or mean sound level deviation of 20 db.

4. Permanently mark setting on valves, splitters, dampers and other adjustment devices.

5. Take measurements to verify balance has not been disrupted or such disruption has been rectified.

6. At final field review, recheck random selections of data recorded in report. Recheck points or areas as selected and witnessed by Owner.

7. When building is occupied before completion, continue execution of work outside occupied hours.

3.5 ACCEPTANCE

1. Mechanical systems shall not be considered ready for final field review until balancing results are acceptable to Consultant.

2. If found that specified flows cannot be achieved on portions of system, actual conditions shall be reported to Consultant for consideration of corrective action before continuing balancing procedure.

3. If measured flow at final field review shows deviation of 10% or more or mean sound level deviation of 10 db or more from certified report listings, by more than 10% of selected areas, report shall be rejected.

4. If report rejected, systems shall be re-balanced and new certified report submitted at no extra cost.

3.6 BALANCING REPORT

1. Submit draft copies of reports before final acceptance of project. Provide 3 copies of final report for inclusion in Operating & Maintenance Manuals.

2. Include types, serial numbers and dates of calibration of instruments.

3. Submit with report, fan curves with operating conditions plotted.

4. Report shall be indexed as follows:

Section 1 Instrumentation and Measurement Procedures

Section 2 System Data (Designed, Installed and Recorded)
–Air Moving Equipment
–Duct System
–Air Inlets/Outlets

Section 3 Drawings
– Balancing Drawings
– Equipment Shop Drawings

Section 4 Discussion of Results

Section 5 Warranty and Certification

3.7 AIR SYSTEM PROCEDURES

1. Execute air systems balancing for each air system in accordance with AABC specifications and as described herein.

2. Make tests with supply, return and exhaust systems operating and doors and windows closed or in normal operation condition.

3. Test and adjust blower rpm to design requirements.

4. Test and record motor full load amps.

5. Make air quantity measurements in ducts by pilot tube traverse of entire cross-sectional area. Take minimum of 16 readings.

6. Test and record required and measured system static pressures; filter differential, coil differential and fan total static pressure.

7. Test and adjust systems for design recirculated air flow rates.

8. Test and adjust systems for design outdoor air quantities.

9. Test and record entering air temperatures (DB heating)(DB/WB cooling).

10. Test and record leaving air temperatures (DB heating)(DB/WB cooling).

11. Adjust main supply and return ducts to design flow rates.

12. Adjust zones to design, supply and return flow rates.

13. Test and adjust each diffuser, grille and register to within 10% of design requirements.

14. Identify each diffuser, grille and register as to location and area.

15. Control and/or equipment manufacturer shall set adjustments of automatically operated dampers to operate as indicated in co-operation with balancing firm.

16. Adjust diffusers, grilles and registers to minimize drafts.

17. Use volume control devices to regulate air quantities only to extent that adjustments do not create objectionable air motion or sound levels. Effect volume control by duct internal devices such as dampers and splitters.

18. Vary total system air flow rates by adjustments of fan speeds. Vary branch air quantities by damper regulation.

19. Provide system schematic with required and actual air flow rates at each outlet or inlet.

20. Record installed fan drive assemblies, fan sheaves, motor sheaves and belts.

21. Complete balancing to achieve positive building pressure unless otherwise instructed. Positive pressure relative to outside pressure of 0.04"w.g. minimum and 0.07"w.g. maximum shall be achieved, measured with negligible outside wind velocity.

4. TESTING

4.1 Test equipment and material where specified or required by Authority having jurisdiction. Test in accordance with applicable portions of ASME, ASHRAE, SMACNA, NFPA, CSA and other recognized test codes.

4.2 Provide notice of tests to Consultant. On completion of installation, provide certification of tests with required detail. Itemize tests as to time performed and personnel responsible. Include copy of field data in Operating and Maintenance Manuals.

4.3 PRESSURE TESTS

1. Piping, fixtures or equipment shall not be concealed until inspected and approved by Consultant.

2. Carry out hydraulic tests for 8 hours. Maintain pressure. Where leakage occurs, repair and re-test.

3. Domestic Water Piping: Test to 1-1/2 times maximum working pressure or 150psi water pressure measured at system low point.

4. Drainage System: Test by filling with water to produce water pressure of 5 ft. water column minimum and 25 ft. water column maximum. Check for proper grade and obstruction by ball test.

5. Gas Piping: Test as required by authority having jurisdiction.

6. Low Pressure Ducts: Test for tightness such that leakage is inaudible and not detectable by feel.

7. Check systems during test including visual check for leakage of water test medium and soap bubbler test for air or nitrogen test medium.

8. Should tests indicate defective work or variance with specified requirements, correct defects. Correct leaks by re-making joints in screwed fittings, cutting out and re-welding welded joints and re-making joints in copper lines. Do not caulk.

4.4 PERFORMANCE TESTS

1. Gas fired appliances shall be subjected to operational testing established by Gas Safety Branch and pass these tests before being approved for operation.

2. Lubricate bearings, adjust and/or replace and set direct and "V"-belt drives for proper alignment and tension.

3. Calibrate and adjust thermostats, thermometers, gauges, linkages and dampers.

4. Operate and test motors and speed switches for correct wiring and sequences. Check overload heaters in motor starters.

5. Fasten loose and rattling pieces of equipment to ensure quiet operation.

6. Provide Rooftop unit start-up reports.

5. VIBRATION ISOLATION AND SEISMIC RESTRAINT

5.1 Provide Vibration Isolators and Seismic Restraint systems meeting requirements of Authority having jurisdiction and Commentary J, Effects of Earthquakes, in Supplement to National Building Code of Canada with regard to seismic forces transmitted to piping/equipment from building structure during an earthquake at project location. Seismic restraint for sprinkler systems shall conform to NFPA 13 and requirements of local Authorities.

5.2 Provide aircraft cable and fastening materials capable of restraining 1.5 times calculated seismic forces transmitted through equipment or piping restrained.

5.3 Installation of restraint systems and fastening methods used shall follow manufacturer's recommendations.

5.4 For suspended equipment where sway will exceed 4", slack cable restraints shall be connected from each support point (minimum 4) to structure at angle of 45o in elevation and at 90o to each other in plan view.

5.5 Provide steel band straps above centre of gravity on vertical tanks anchored to structure. Straps, anchor bolts and straps shall be capable of withstanding seismic forces in all directions. Provide minimum 2 anchor straps around horizontal tanks mounted on saddles with anchor bolts to floor structure.

5.6 Where top of individually suspended pipe or duct is less than 12" below supporting structure, transverse and longitudinal bracing shall not be required.

5.7 Provide transverse and longitudinal seismic restraint on nominally horizontal piping as follows:

Service	Sizes Where Required	Longitudinal Restraint Spacing	Transverse Restraint Spacing
gas piping	1" and larger	40'-0" on centre	20'-0" on centre
All other pipe services	21/2" and larger	80'-0" on centre	40'-0" on centre

5.8 Cables shall be tightened to remove slack (1-1/2" deflection under thumb pressure), but shall not support any weight under normal operating conditions. Allowances shall be made for normal expansion and contraction of piping systems where applicable.

6. FIRE STOPPING

6.1 WORK INCLUDED: Furnish labour, material, equipment and services necessary to provide firestopping and smoke seals around mechanical service piping and duct penetrations through fire rated wall and floor assemblies to CSA standard CAN4-S115-M85 and Authorities having Jurisdiction.

6.2 Work shall be carried out by approved specialist firm, employing tradesmen experienced in firestopping and smoke seals application. Installing Contractors shall be certified by the British Columbia Insulation Contractors Association for work specified. Work shall be installed in accordance with manufacturer's recommended installation procedures.

6.3 Acceptable firestopping systems; for Vertical Penetrations: 3M Fire Barrier Penetration Sealing System, BIO-Fire Protection Ltd. Fire Stopping and Smoke Seals, Dow Corning Fire Stop Sealant; for Horizontal and Poke Through Penetrations: Fyre Sleeve and Fyre Flange as manufacturer by Fyre Sleeve Industries Inc.

6.4 Location and extent of fire separations shall be confirmed with architectural drawings.

7. INSULATION

7.1 Insulation thicknesses and performance shall conform to requirements of ASHRAE/IES Standard 90.1-1989 (Table 9-1 Minimum Pipe Insulation, Table 9 Minimum Duct Insulation).

7.2 Work shall be carried out by skilled workmen regularly engaged in this type of work. Deliver material to project site in original non-broken factory packaging, labelled with manufacturer's density and thickness.

7.3 British Columbia Insulation Contractors Association (BCICA) Standards Manual, latest edition, shall form part of this specification for mechanical insulation. Copy of current Standard shall be available at site.

7.4 Materials and application temperatures shall be as recommended by adhesive, coating or sealer manufacturer. Make good separations of joints or cracking or insulation due to thermal movement or poor workmanship.

7.5 Composite fire and smoke hazard ratings for adhesives, insulation, coatings and jackets shall not exceed 25 for flame spread and 50 for smoke developed or otherwise as required by Code. Use only ULC listed or tested recovering materials.

7.6 PIPING: Mineral fibre insulation preformed for piping with integral all service jacket, Standard 1501-A.2.

1. Insulation Thickness Schedule:

Piping to be Insulated	Insulation Thickness
Domestic Cold (except run-outs to individual fixtures less than 12'-0" concealed in length)	1"
Domestic Hot and Recirculation (except run-outs to individual fixtures less than 12'-0" concealed in length) up to 2"	1"
Domestic Hot and Recirculation over 2"	11/2"

2. Application: Hot piping 1501-H; Cold piping 1501-C.

3. Finishes: Exposed piping PF2 Premium 2 (or 15 mil PVC jacket with solvent weld); Concealed piping PF3 Economy. All finishes complete with 25/50 rated PVC fitting covers.

7.7 DUCTWORK AND PLENUMS (STANDARD 1502)

1. Insulation Thickness Schedule:

Ducts and Equipment to be Insulated	Insulation Thickness
Outside and combustion air ducts	2"
Acoustic Duct Liners As Indicated	1"
Plenums Below Roof Mounted Fans (Acoustical Lining)	1"

2. Applications:
1. Rigid Insulation External Application: Exposed in finished areas and in mechanical rooms, ER/1 hot duct and plenum and ER/2 cold duct and plenum.
2. Flexible Insulation External Application: Concealed hot duct EF/1; Concealed cold duct ER/2.
3. Duct Liner (Internal Application): Semi-rigid 1S/1; Rigid 1R/1.

3. Finishes:
1. Concealed: Insulation on concealed ductwork shall be left factory finished with no further finish required.
2. Mechanical Rooms: Rectangular RF/2 Custom; Round RD/2 Custom.
3. Exposed Ductwork and Plenums (in finished areas): Rectangular RF/3 Premium/Custom Alternate; Round RD/3 Premium/Custom Alternate.

4. ACOUSTIC LINING: Fibreglass insulation with neoprene surface coating or matt faced to prevent fibre erosion, Standard 1502-C.2 for ductwork and 1502-C.1 for plenums. Acoustic lining as indicated on drawings; all joints and raw edges to be sealed.

8. PLUMBING

8.1 Provide and/or relocate plumbing fixtures with trim, and water heater with required accessories as specified on the drawings.

8.2 PIPE AND FITTINGS

Size	Pipe	Fittings
1. Sanitary Drainage and Vent Piping Above Grade:		
To 21/2"	DWV copper	Wrought or cast brass with 50-50 solder; recessed drainage pattern
All sizes Cast iron		Mechanical joints with s.s. couplings

Types of piping used "inside building" shall be used to 12'-0" outside building.

2. Sanitary Drainage and Vent Piping Below Grade (Inside Building):

All sizes Cast iron ABS-DWV	Mechanical joints with s.s. couplings Solvent joints

3. Storm Drainage Below Grade (Inside Building):

All sizes Cast iron ABS-DWV	Mechanical joints with s.s. couplings Solvent joints

4. Storm Drainage Piping Above Grade (Inside Building):

All sizes Cast iron	Mechanical joints with s.s. couplings

5. Sanitary and Storm Drainage (Outside Building):

All sizes Cast iron	Mechanical joints with s.s. couplings or grooved mechanical joints
ABS-DWV Storm only	Solvent joints Concrete Rubber gasket

6. Domestic Water Piping Below Grade (Outside Building):

To 3"	Type "K" soft copper Ductile iron	Flared tube Hub and spigot with mechanical clamp and rod on long radius bends or push on rubber gasket joints to CSA B131.10
to 21/2"	Class 150 or Series 200 PVC	Solvent Joints/ Schedule 40 fittings

7. Domestic Water Piping Above Grade:

All sizes Certified type "L" or type "K" hard copper	Wrought bronze or cast brass with Silvabrite 100 lead free solder. Roll grooved copper may be used in lieu of sweated joints; all grooved couplings to be designed with angle bolt pads to provide a rigid joint. Standard of acceptance: VICTAULIC Style 606.

8. Gas Piping:

All sizes Sch 40 black steel	Malleable screwed or butt welded joints. Piping over 2" inside building shall be welded. Buried pipe shall be yellow jacketed with cathodic protection.

8.3 WATER SPECIALTIES

1. Hose Bibbs: Provide as specified in Hose Bibb and Drain Schedule.

2. Water Hammer Arresters:

1. Provide 18-8 stainless steel all-welded bellows type arrester complete with isolation valve on water lines connected to but not limited by the following:
1. Each fixture or group of fixtures.
2. Commercial dishwashers.
3. Other devices with solenoid valves.

2. Size arresters as per P.D.I. Standard WH201.
3. Arrester and isolation valve shall be completely accessible.

3. Back Flow Preventer Assemblies:

1. Provide vacuum breaker on domestic water supply to commercial dishwashers and janitor sinks and other required fixtures as noted in the fixture schedule.

2. Provide air gap fitting on drain from required fixtures. Equal to Watts 900 AG.

4. Meters:

1. Water meter shall conform to AWWA C-700 for displacement meter and AWWA C-702 for compound meter complete with direct reading sealed encoder register to AWWA C-707. Water meter shall conform to the requirements of local authority.
2. Provide water meter and three valve bypass of size indicated on drawings; provide water pressure gauge with isolation valve on incoming service line. Meter to have remote reader with conduit and wiring under Division 16.

5. Trap Seal Primers: Provide priming device and piping to nearest acceptable fixture so that device will introduce regulated amount of water into trap. Equal to Watts 200.

6. Potable Water System Pressure Reducing Valve

1. Provide pilot operated globe type pressure reducing valve with bronze strainer assembly to limit static water pressure to 85psi on incoming water line to Plumbing Code requirements. PRV shall be WATTS Model PV-10M with Y strainer to sizes indicated.
2. Provide pressure reducing valves with isolation valves on hot and cold risers as indicated on riser diagrams.

8.4 CLEAN-OUTS AND ACCESS COVERS

1. Clean-outs in concrete shall be adjustable type for level installation.

2. In unfinished areas (e.g. mechanical rooms, storage rooms), floor clean-out access covers shall be round cast iron scoriated frames and plates, Zurn Z-1500.

3. In finished areas, covers shall have depressed centre to accept floor finish, Zurn ZN-1508.

4. Clean-outs on subsurface drainage system extensions shall be Zurn Z-1500 in unfinished concrete (e.g. parking, mechanical rooms), Zurn Z-1440 encased in 16" x 16" x 4" thick concrete pad in soft landscaping and Zurn Z-1502 in finished concrete or pavers.

5. Wall clean-outs shall have chrome plated cap.

6. Provide clamping collar and flashing on clean-outs passing through waterproofing membrane.

8.5 DRAINS

1. Provide drains as specified in Hose bibb and Drain Schedule with lacquered cast iron body (except as noted otherwise) and clamping collar.

2. Provide drains by single manufacturer throughout.

3. Drains shall be 4" unless noted otherwise.

8.6 DOMESTIC HOT WATER HEATERS

1. Construct propane-fired domestic hot water heaters to CSA B204.1-T and CSA B204.3-T. Heaters with input larger than 200mbh shall be ASME labelled.

2. Provide heaters as indicated complete with factory installed controls and safety devices.

3. Provide lever operated temperature and pressure relief valve for waterheater.

4. Provide check valve between domestic cold water supply and heaters.

8.7 PORTABLE HAND FIRE EXTINGUISHER

1. Multi-Purpose Dry Chemical: Pressurized with hose and shut-off nozzle or integral shut-off nozzle and mounting brackets suitable for Class A, B and C fires; charge indicator. Provide installation in surface mounted cabinet in public areas.

8.8 PLUMBING FIXTURES AND TRIM

1. Provide new fixtures, CSA approved, free from defects with clear, smooth and bright finished surfaces.

2. Fixtures shall be product of one manufacturer and of same colour for washroom or location used throughout project.

3. Provide CSA approved plumbing brass with metal work heavy chromium plated and product of one manufacturer throughout.

4. Provide flexible angle type hot and cold water supplies with screwdriver stop, hexagonal reducer and escutcheon. Provide heavy chromium plating where exposed.

5. Review millwork drawings and advise Consultant of discrepancies before ordering fixtures.

6. Provide fixtures and trim as specified in Plumbing Fixture Schedule or approved alternate.

8.9 GENERAL

1. No pipe shall be installed in any part of wall where temperature is less than 5oC under winter design conditions.

2. Upon completion, water piping systems shall be flushed with water before installation of fixtures in order to remove any foreign material in piping. Plumbing fixtures and equipment shall be thoroughly cleaned and left in good operating condition.

3. Provide connections as required including shut-off valves with unions or flanges to equipment installed by other trades.

8.10 PIPE CONNECTIONS

1. Ream pipes and tubes. Clean scale and dirt, inside and outside, before assembly. Remove foreign material from piping.

2. Grade drainage lines minimum 2%, piping 4" and larger may be graded at 1% slope. Plug or cap pipe and fittings to keep out debris during construction. Lay pipe in proper compacted bedding material; do not lay pipe when water in trench. Provide 1500psi concrete for buried lines within 45 deg. of footing.

3. Grade vents so condensation will not form trap.

4. Pipe with stainless steel type mechanical joints shall be supported by means of two hangers located on each side of joint.

5. Reduce horizontal piping with eccentric reducer fittings installed to provide drainage and eliminate air pockets.

6. Make screwed joints in steel or iron piping with full cut standard taper pipe threads. Use non-corrosive and non-toxic lubricant or teflon tape applied to male thread.

7. Joints in copper drainage pipe shall be made in accordance with manufacturer's recommendations. Use soft solder. Joints in buried copper pressure piping shall be flared joint type. Joints in above grade copper pressure pipe shall be Silvabrite 100 lead free solder and flux. Flux shall be full strength when applied and not diluted.

8. Wherever dissimilar metals are joined or supported, piping shall have non-conducting type connections or hangers to prevent galvanic corrosion. Brass adapters and valves are acceptable for pipe connections.

9. Provide equipment drainage lines to discharge into hub or funnel drain. Review with Consultant where equipment cannot be piped to drain; do not run lines across floor.

10. Install piping to allow for expansion and contraction without stressing pipe or equipment connected.

11. Provide clearance for insulation and access to valves, air vents, drains and unions.

12. Install gas piping in open ventilated spaces. Pitch lines and provide drip legs. Where gas piping is run in concealed space, provide ventilation grilles as required. Gas piping larger than 2" installed within building shall be welded. After approval of piping installation, connect appliances and purge gas piping and conduct gas leakage tests.

8.11 UNIONS AND FLANGES

1. Provide unions or flanges to permit equipment removal without disturbing piping systems.

8.12 VALVES

1. Use gate valves for shut-off and globe valves for throttling. Globe valve discs shall be suitable for service intended. Mount valves with stems upright or horizontal, not inverted. Ball valves shall be acceptable for shut-off or throttling service.

2. Provide line size bronze check valve on cold water supply to domestic water heaters.

8.13 WATER SPECIALTIES

1. Provide hose bibbs as indicated.

2. Provide water hammer arresters as specified.

3. Provide back flow preventers as specified and required by Authorities.

4. Provide trap primers to floor drains as indicated and required by Code.

8.14 CLEAN-OUTS AND ACCESS COVERS

1. Install accessible clean-outs at traps, where required by Code and as indicated on drawings.

2. Provide pipe extensions on underslab and on perimeter subsurface drainage systems for inspection and clean-out locations indicated on drawings complete with clean-outs.

3. Clean-outs shall be suitable for surface finish detailed on Architectural drawings and traffic loading requirements.

8.15 FLOOR DRAINS: Review location of drains on Architectural drawings and confirm with Consultant that drains will be at low points on floor. Improperly located drains shall be relocated at no cost to Owner.

8.16 DOMESTIC HOT WATER HEATERS

1. Provide as specified complete with sheet metal drain pan; ensure good access to heaters for servicing. Pipe relief outlet to drain.

2. Provide type B vents on gas fired units.

8.17 FIRE PROTECTION: Provide extinguishers as specified; confirm charge at final inspection.

8.18 PLUMBING FIXTURES

1. Install each fixture with its own trap, easily removable for servicing and cleaning. At completion, thoroughly clean plumbing fixtures and equipment.

2. Install wall mounted fixtures with approved wall carriers, model to suit installation.

3. Where fixtures or trim come in contact with wall and/or floor, make joint watertight with white silicone base non-hardening caulking compound, finished in neat manner.

4. Mount wall hung fixtures the following heights above finished floor:

1. Water Closet: Standard 15" to top of bowl rim and handicapped 18" to top of seat.
2. Urinal: Standard 22" to top of bowl rim with one urinal mounted 20" to top of bowl rim in each washroom.
3. Lavatory: Standard 31" to top of basin rim and handicapped 32" to top of basin rim.

5. Attach floor mounted water closets to floor with lag screws. Lead flashing shall not hold closet in place.

6. Provide fixed cover on handicapped water closet tank.

8.19 SERVICE CONNECTIONS

1. Coordinate obtaining and arrange for payment of utility and service connection fees with General Contractor.

2. Before commencing work, confirm invert elevations required for sewer and water connections.

3. Provide concrete thrust blocks on water service lines at each bend, elbow, cross tee and valve.

4. Domestic water lines shall be disinfected with chlorine content solution for 24 hours.

9. VENTILATION

9.1 DUCTWORK

1. Ductwork shall be galvanized steel. Fabricatea in accordance with recent SMACNA Duct Manuals and ASHRAE Handbooks. Ductwork shall meet the requirements of NFPA 90A and 91 and conform to applicable codes.

2. Prior to fabrication of ductwork, check all ceiling spaces and heights and conflictions with other trades.

3. Duct Sizes: Inside clear dimensions. For acoustically lined or internally insulated ducts, maintain sizes inside ducts.

4. The minimum sheet metal thickness for low pressure ducts, medium pressure 2"w.g. and 1"w.g. including fittings, access doors and other accessories, shall be as in accordance with SMACNA 1985 "HVAC Duct Construction Standards – Metal and Flexible".

5. All transverse duct joints shall be sealed (Class C SMACNA) with duct sealant.

9.2 AIR OUTLETS: Provide and/or relocate air outlets as specified on the drawings.

9.3 SUPPLY/EXHAUST FANS: Provide fans as specified on the drawings. Fans to be AMCA rated centrifugal wheels with non-overloading power characteristic, stable pressure curve and self aligning bearings.

10. CONTROLS

1. Provide a complete ddc system of automatic controls to acheive the following sequence:
(a). Exhaust fans F-1 & F-2 controlled according to programmed occupancy schedule.
(b). Summer Day Cycle:
–Relief Dampers MD-3 & MD-4 open depending on wind direction. Provide wind vane c/w finger switches to detect wind direction.
–MD-1 & MD-2 open to maintain space temperature.

(c). Summer Night Cycle:
–Relief Dampers MD-3 & MD-4 open depending on wind direction. Provide wind vane c/w finger switches to detect wind direction.
–MD-1 & MD-2 open if outdoor air temperature falls below 72dF.
–MD-1&2 and MD-3&4 remain open until slab temperature moss sensor detects a temperature below 60dF.
–Electric baseboards are locked out when outdoor air temperature is above 40dF.

(b). Winter Day Cycle:
–Electric baseboards are cycled by room sensors to maintain space temperature.
–CO2 sensor modulates MD-1 & MD-2 to maintain 550ppm CO2 level in space.
–Relief dampers MD-3 & MD-4 open depending on wind direction.

(c). Winter Night Cycle:
–Electric baseboards are cycled to maintain the night setback temperature.
–Moss slab temperature system to function until outdoor air temperature falls below 50dF.

2. Provide all components and coordinate with the electrical trade for power connections. All control wiring by Div. 15 forces.

3. All thermostats and sensors shall be wall or column mounted at 60" above floor unless specifically noted otherwise. Coordinate final mounting locations with Interior Designer/Architect and Consultant on site before rough-in.
